Situation Overview

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

NOTE: Do not focus on the exact track. Impacts can occur well outside the area enclosed by the cone.

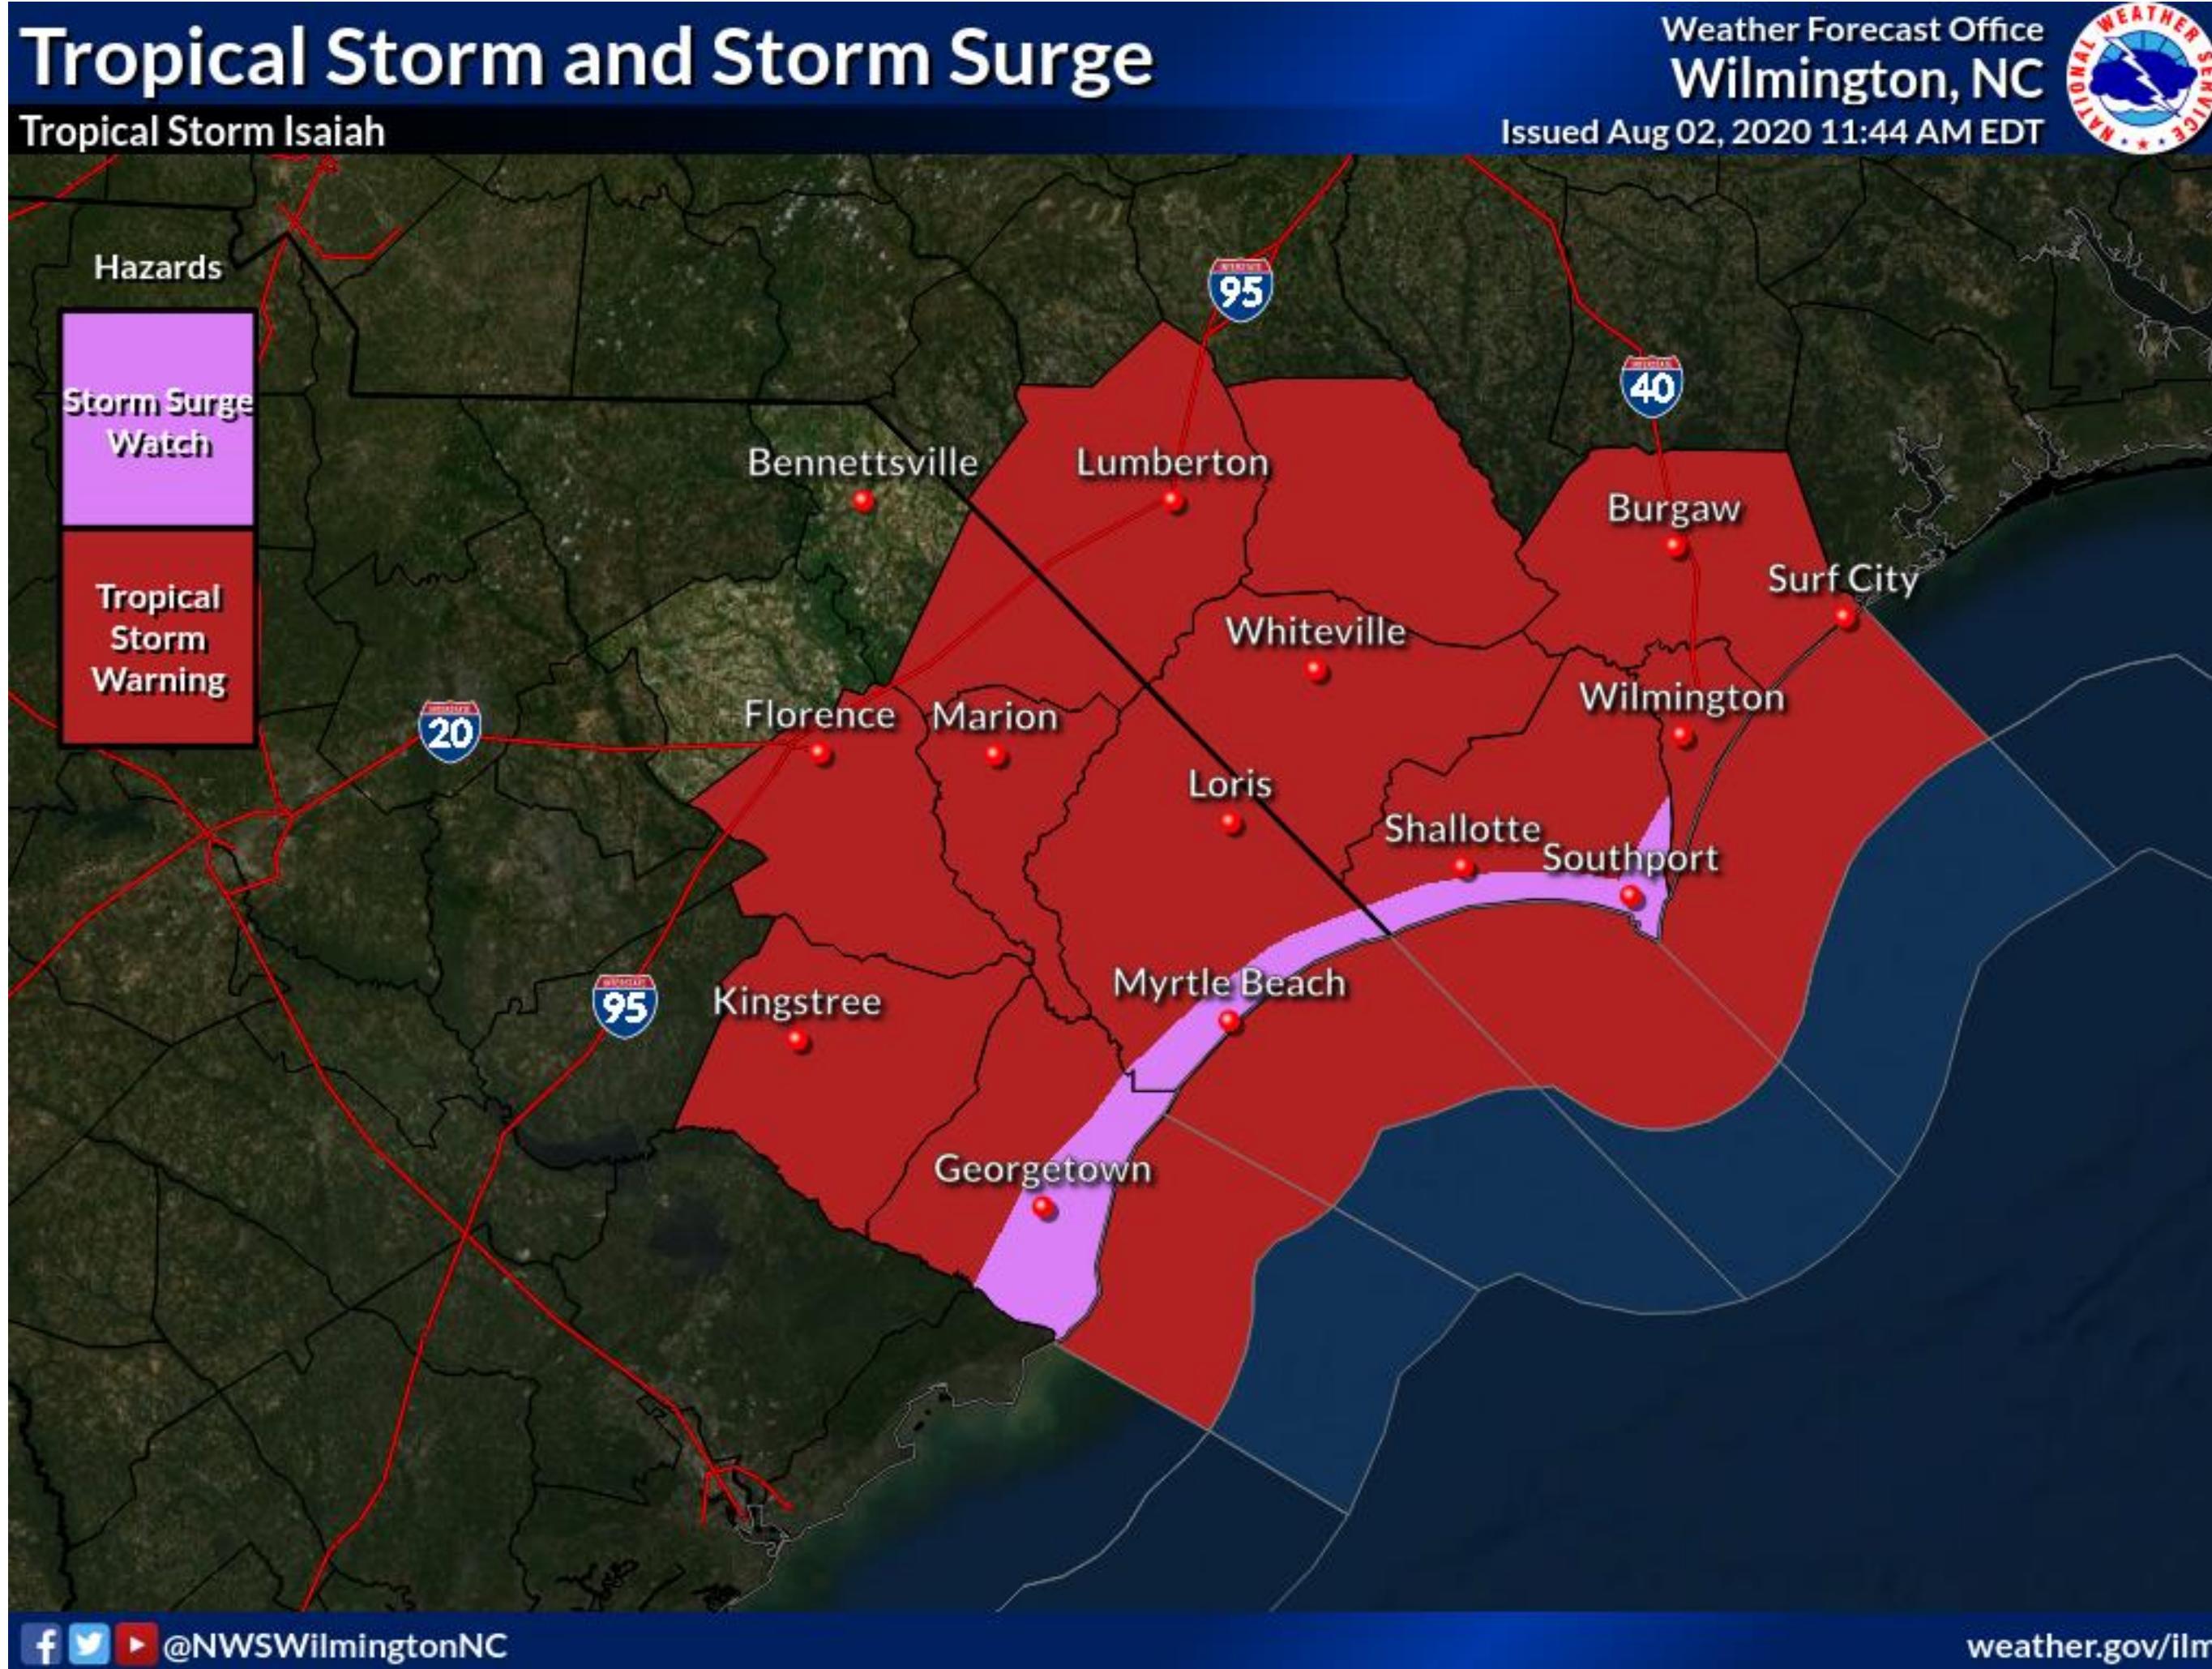

Watches & Warnings

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

- A Tropical Storm Watch is in effect for all areas except Marlboro and Darlington counties
- A Storm Surge Watch is in effect for Brunswick, Horry, and Georgetown counties
- A Flash Flood Watch (not shown) is in effect for all counties

Situation Overview

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Hazard	Impacts	Location	Timing
Wind	Potential wind impacts including minor structural damage, downed trees/limbs and scattered power outages	Most areas, but especially northeast SC coastal areas	Monday evening into Tuesday morning
Storm Surge/Inundation	Potential storm surge impacts including some flooding of coastal roads and beach access, some damage to vulnerable coastal structures, damage to beach ramps and stairways, beach erosion	Especially northeast SC coastal areas	Especially around high tide Monday night
Flooding Rain	Potential for moderate flooding impacts, especially near poor drainage and low-lying flood prone locations	Northeast SC and southeast NC	Monday afternoon into Tuesday morning
Tornado	Some tornadoes possible with damage to trees, structures, and power lines	Most areas but especially coastal areas of Northeast SC and southeast NC	Monday afternoon into Tuesday morning
Marine	Hazardous marine conditions and dangerous rip currents	All waters coastal and nearshore waters, and beaches	Rip current threat continues early next week. High seas/wind highest Monday night into early Tuesday morning

TS Wind Speed Probabilities & Arrival Times

Tropical Storm Isaias

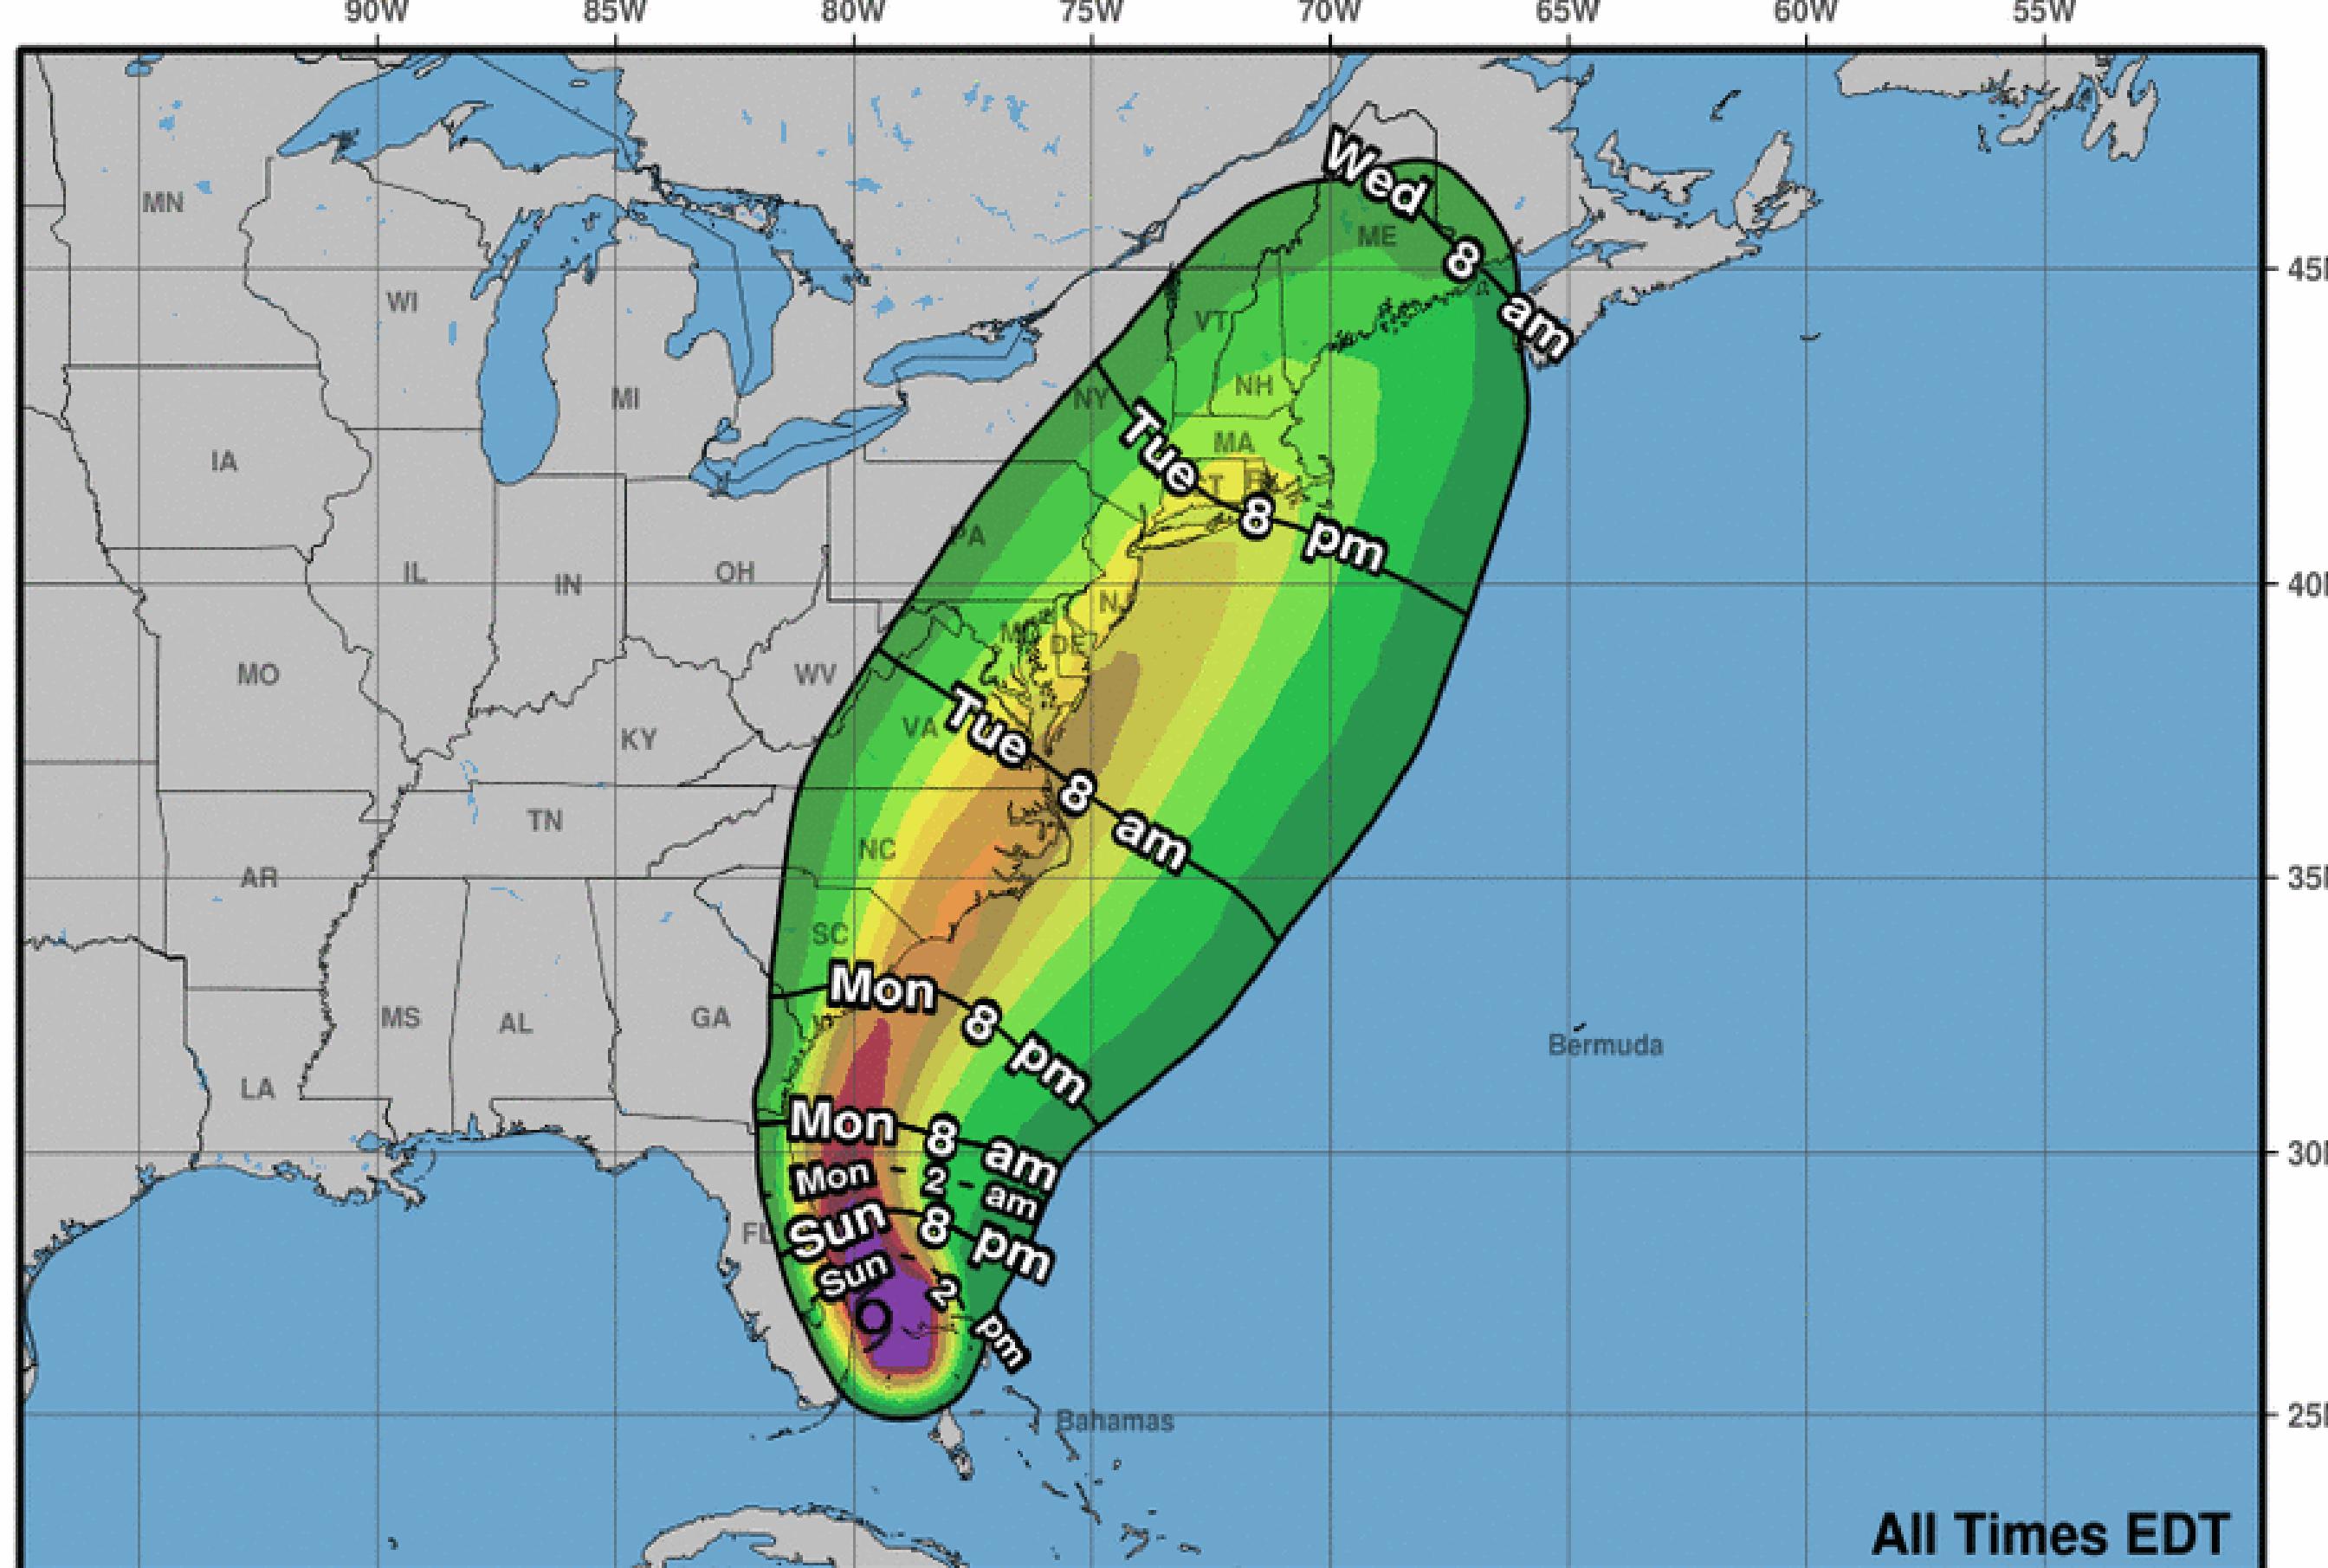

Wilmington NC

WEATHER FORECAST OFFICE

0-3 Day Most Likely Arrival Time of Tropical-Storm-Force Winds

Tropical Storm Isaias

Sun. Aug. 2, 2020 11 am EDT

Advisory 22

Storm Location

&

Wind Speed

Wind Speed

< 34 kt (39 mph)

34-63 kt (39-73 mph)

≥ 64 kt (74 mph)

3-day chance of receiving sustained 34+ kt (39+ mph) winds

5 10 20 30 40 50 60 70 80 90 100 %

- The probabilities for tropical storm force winds indicate a high likelihood of tropical storm force winds, especially for southeast NC and coastal areas of northeast SC
- The most likely arrival of tropical storm force winds is Monday night for northeast SC and southeast NC.

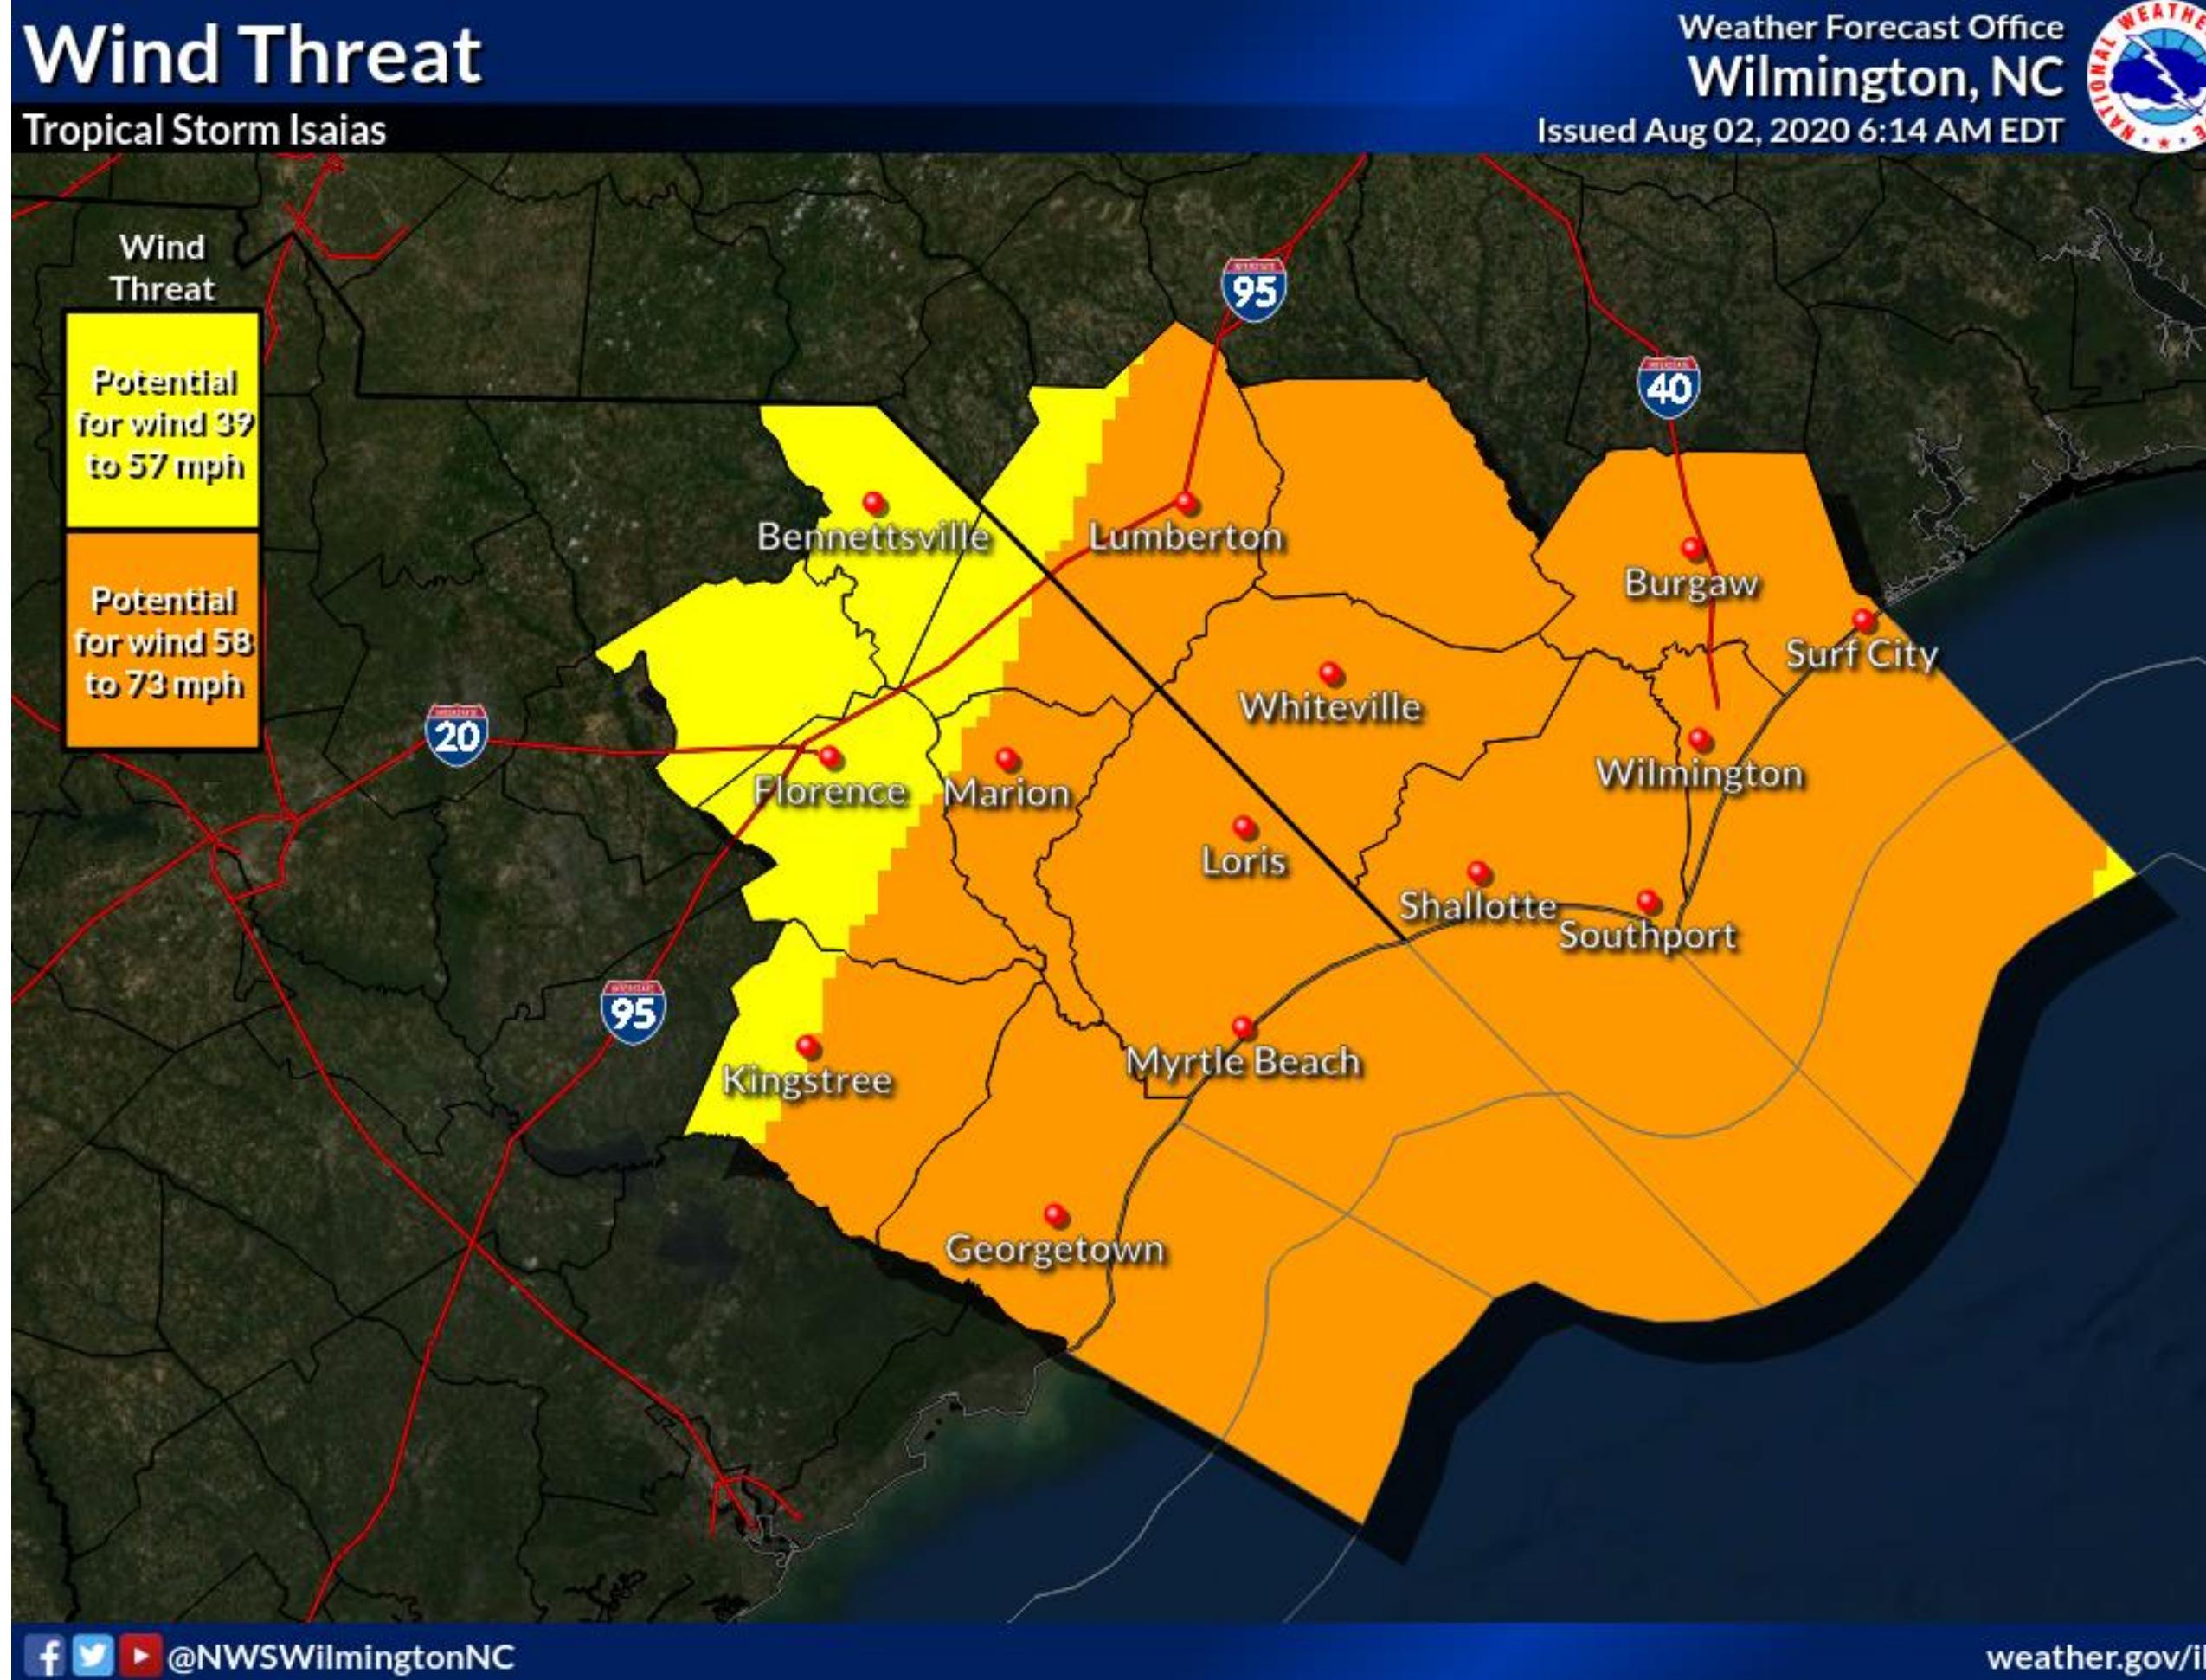

Wind Threat / Potential Impact

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

There is a potential for moderate winds impacts across a large area of northeast SC and southeast NC

- Potential impacts include some damage to roofing and siding, along with damage to porches, awnings, carports, and sheds
- Large limbs and some trees down with scattered power outages
- Some small craft may break loose if they are not properly moored

Wind Information

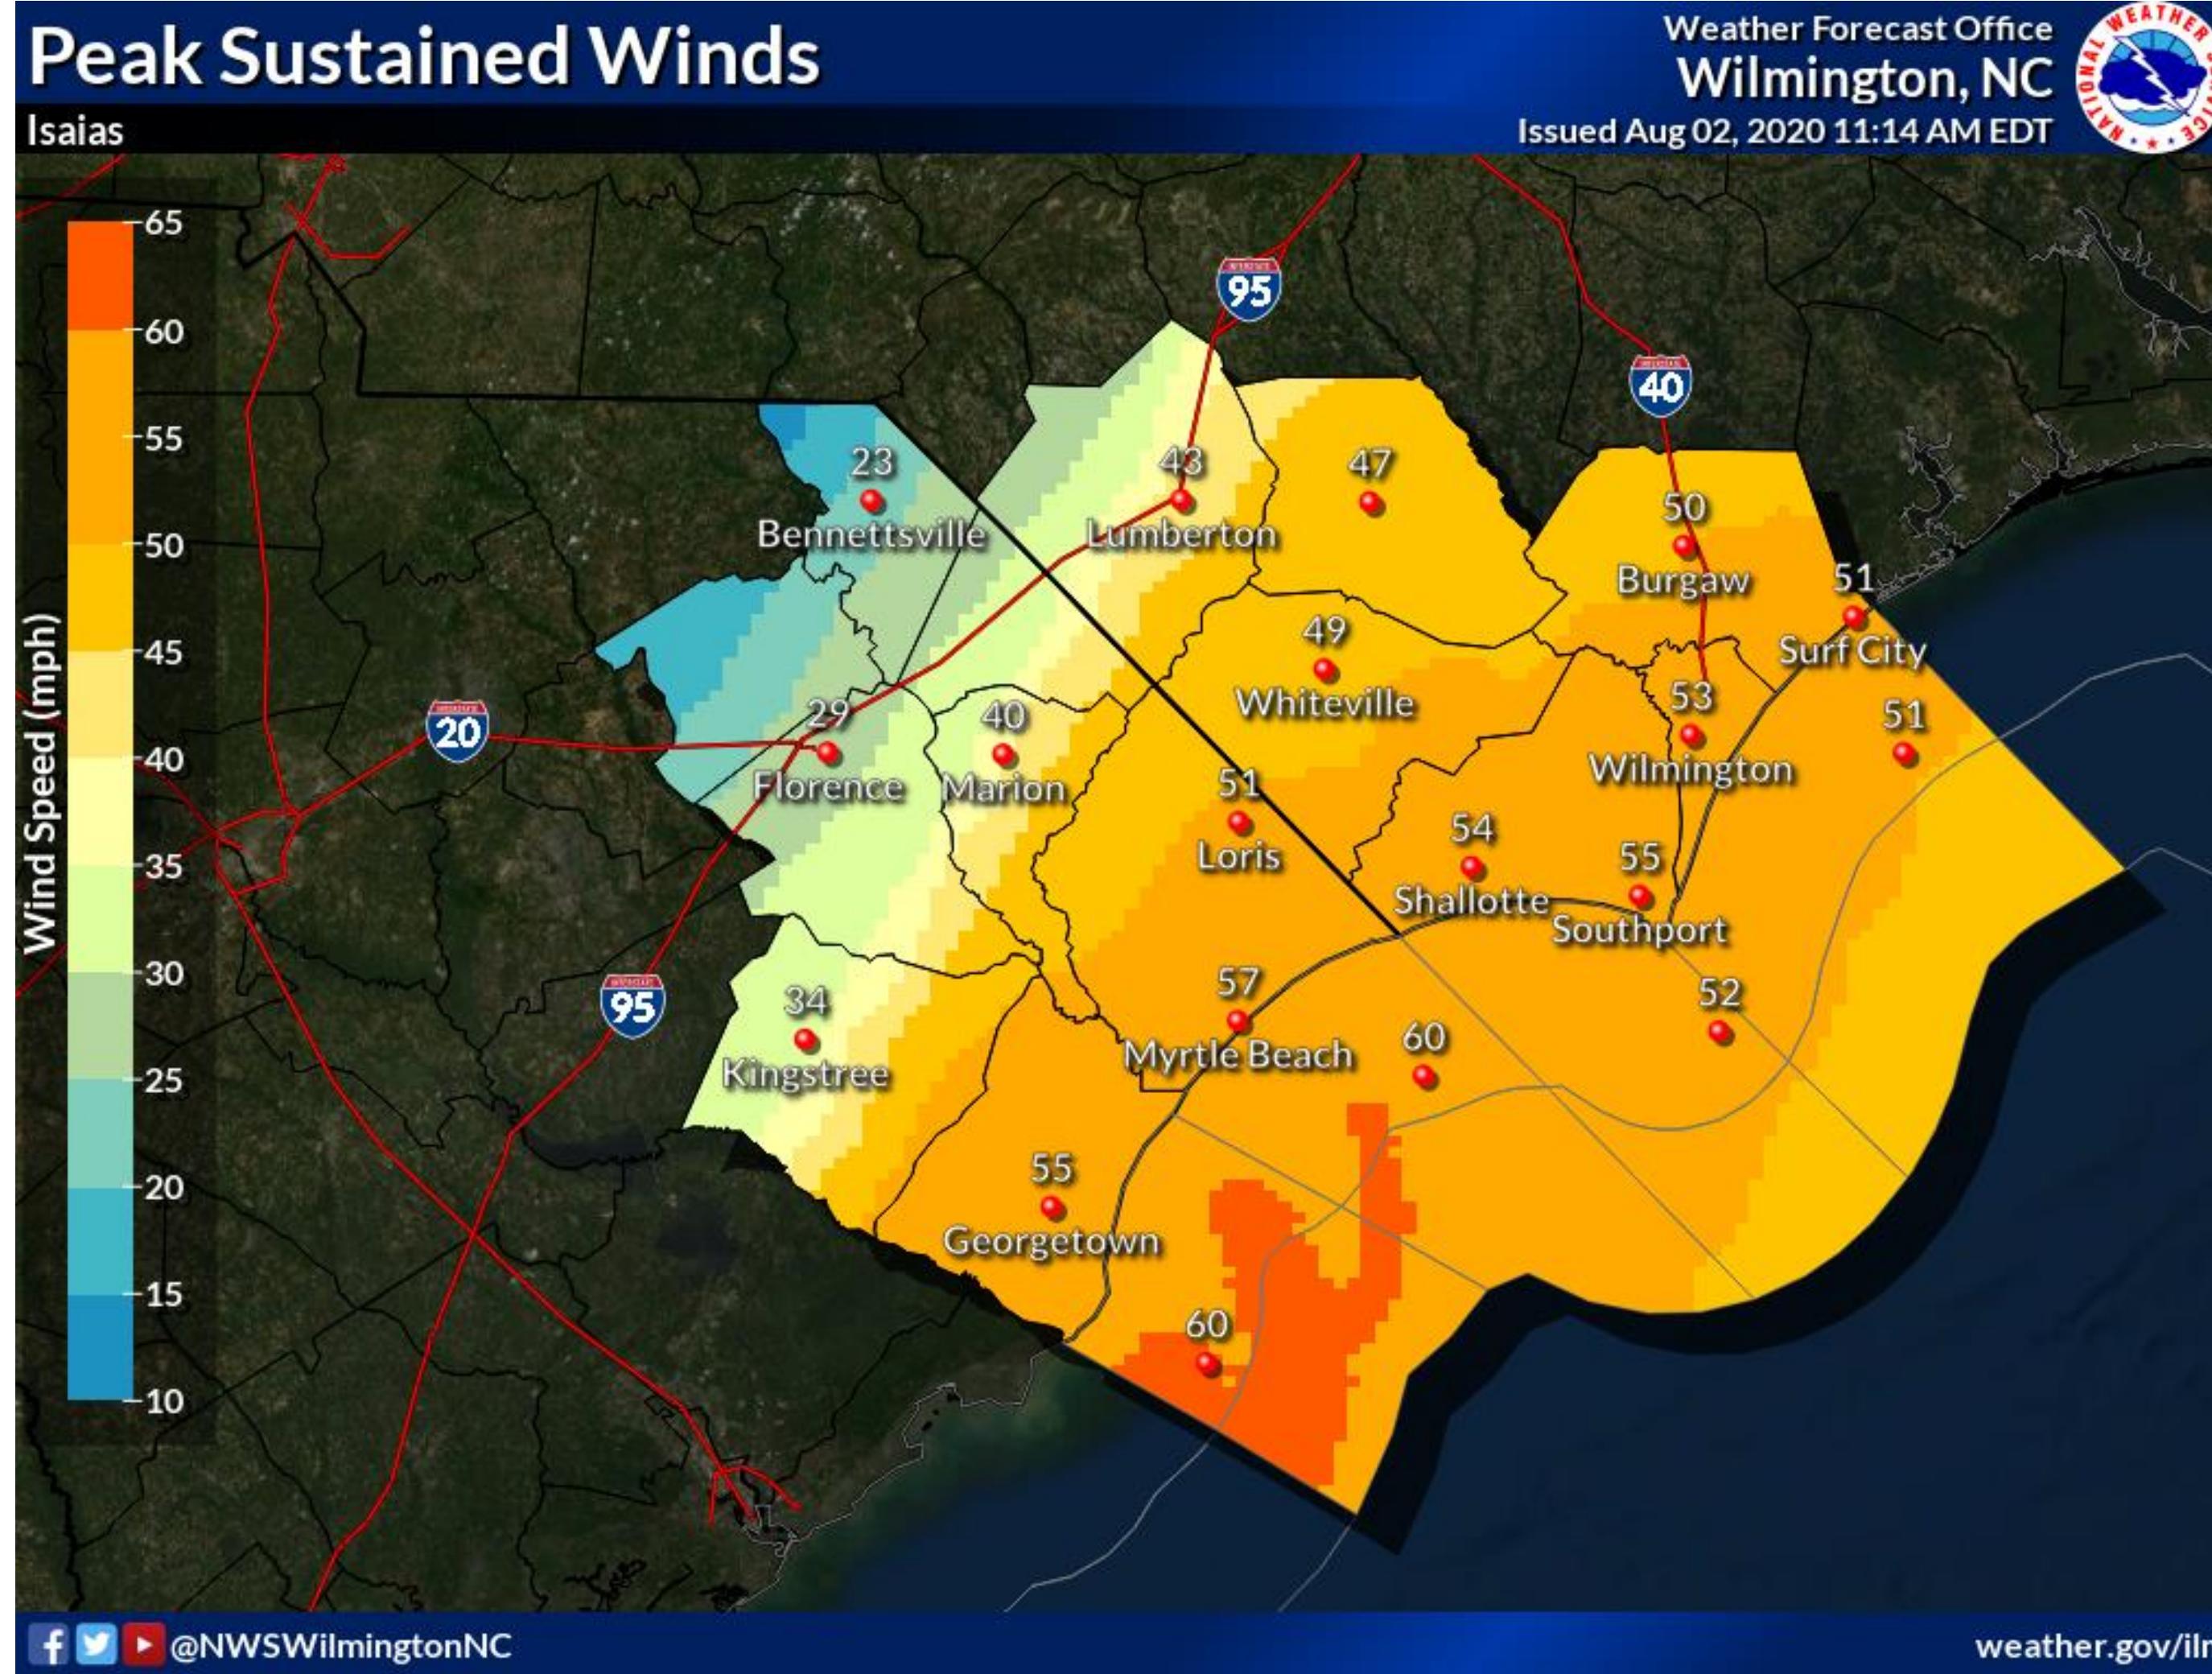

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Peak Sustained Winds

Note: These winds are **highly dependent** on the storm's track and intensity. As a result, any change could result in significant differences to the peak sustained winds that occur.

- Potential sustained winds have increased some
- The potential for the highest sustained winds is along the coastal areas of northeast SC
- Areas with the highest winds can expect downed trees/limbs, damage to fences, awnings, and unanchored mobile homes
- In addition, some power outages are possible in the areas that have the higher winds

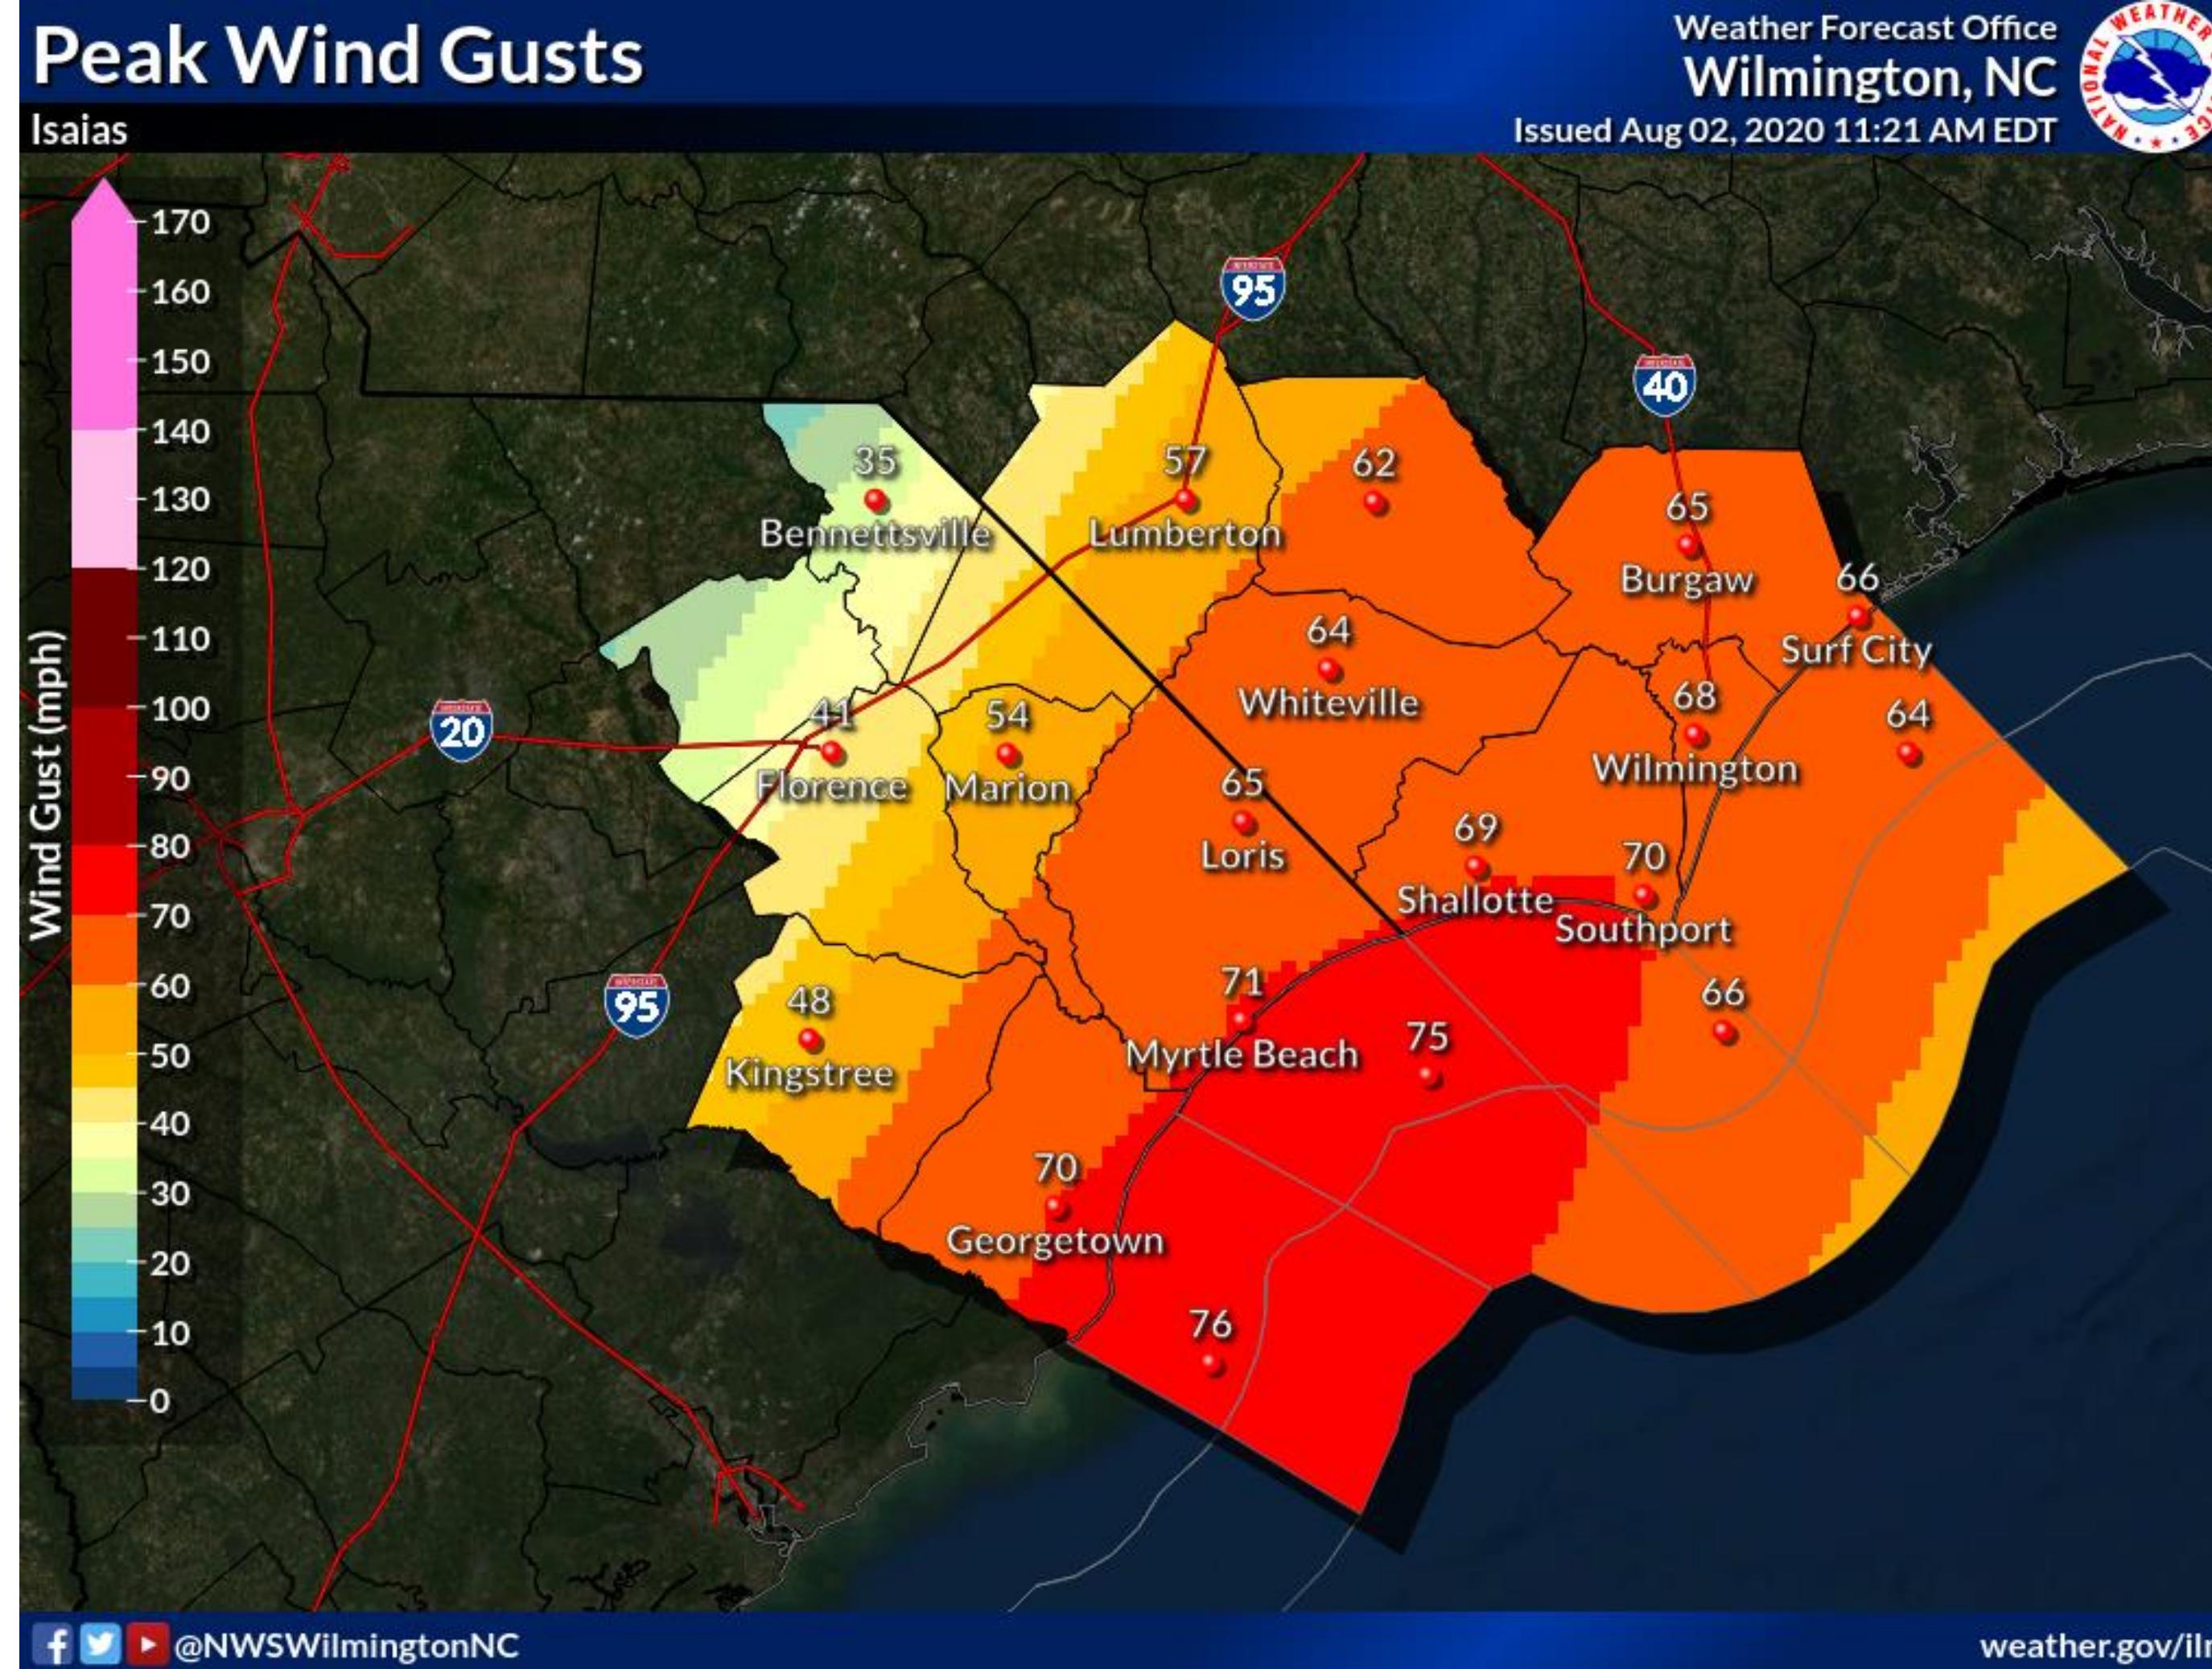

Wind Information

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Note: These winds are **highly dependent** on the storm's track and intensity. As a result, any change could result in significant differences to the peak wind gusts that occur.

- Potential wind gusts have been increased, especially across coastal areas of the Cape Fear region
- The coastal areas of northeast SC have the greatest potential to see strong tropical storm force wind gusts
- Keep in mind that some uncertainty exists with the storm's intensity and track which would greatly influence sustained winds and gusts across the area

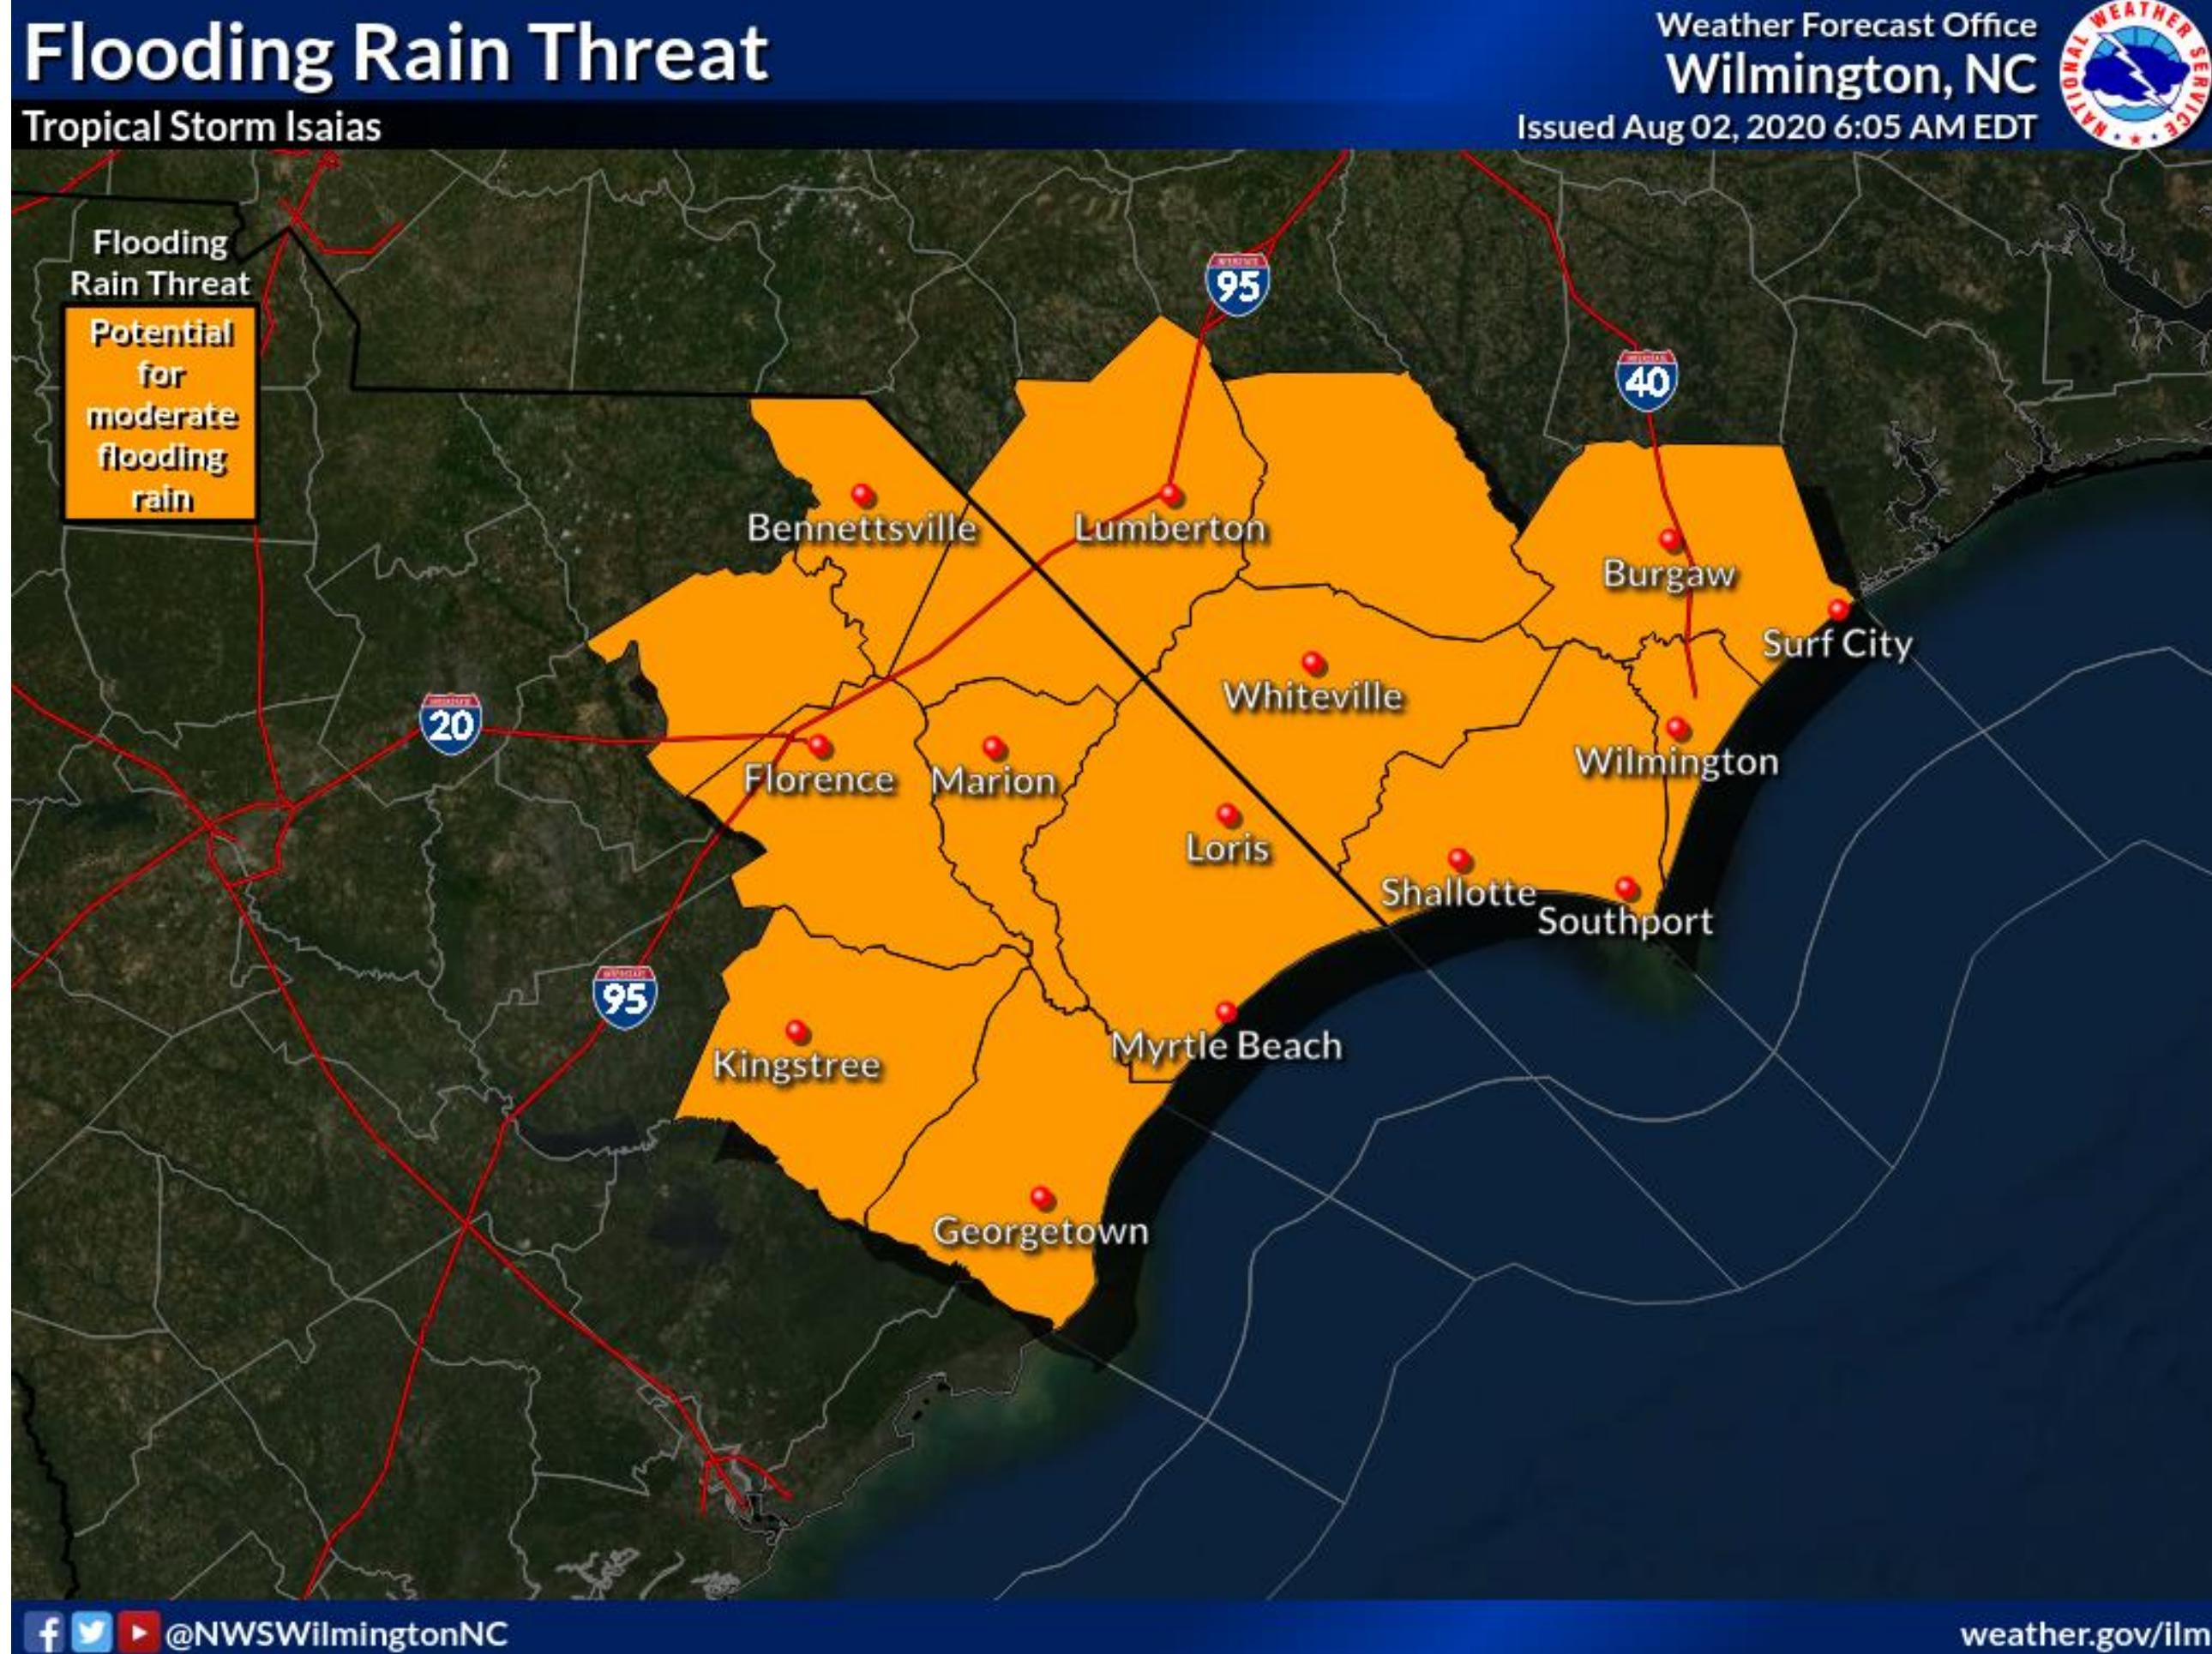

Inland Flooding Impacts

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

There is a moderate threat for flooding

- Potential impacts include some low-lying areas along roads flooded, flooding near poor drainage and prone locations
- Driving conditions will become hazardous with the some road closures possible

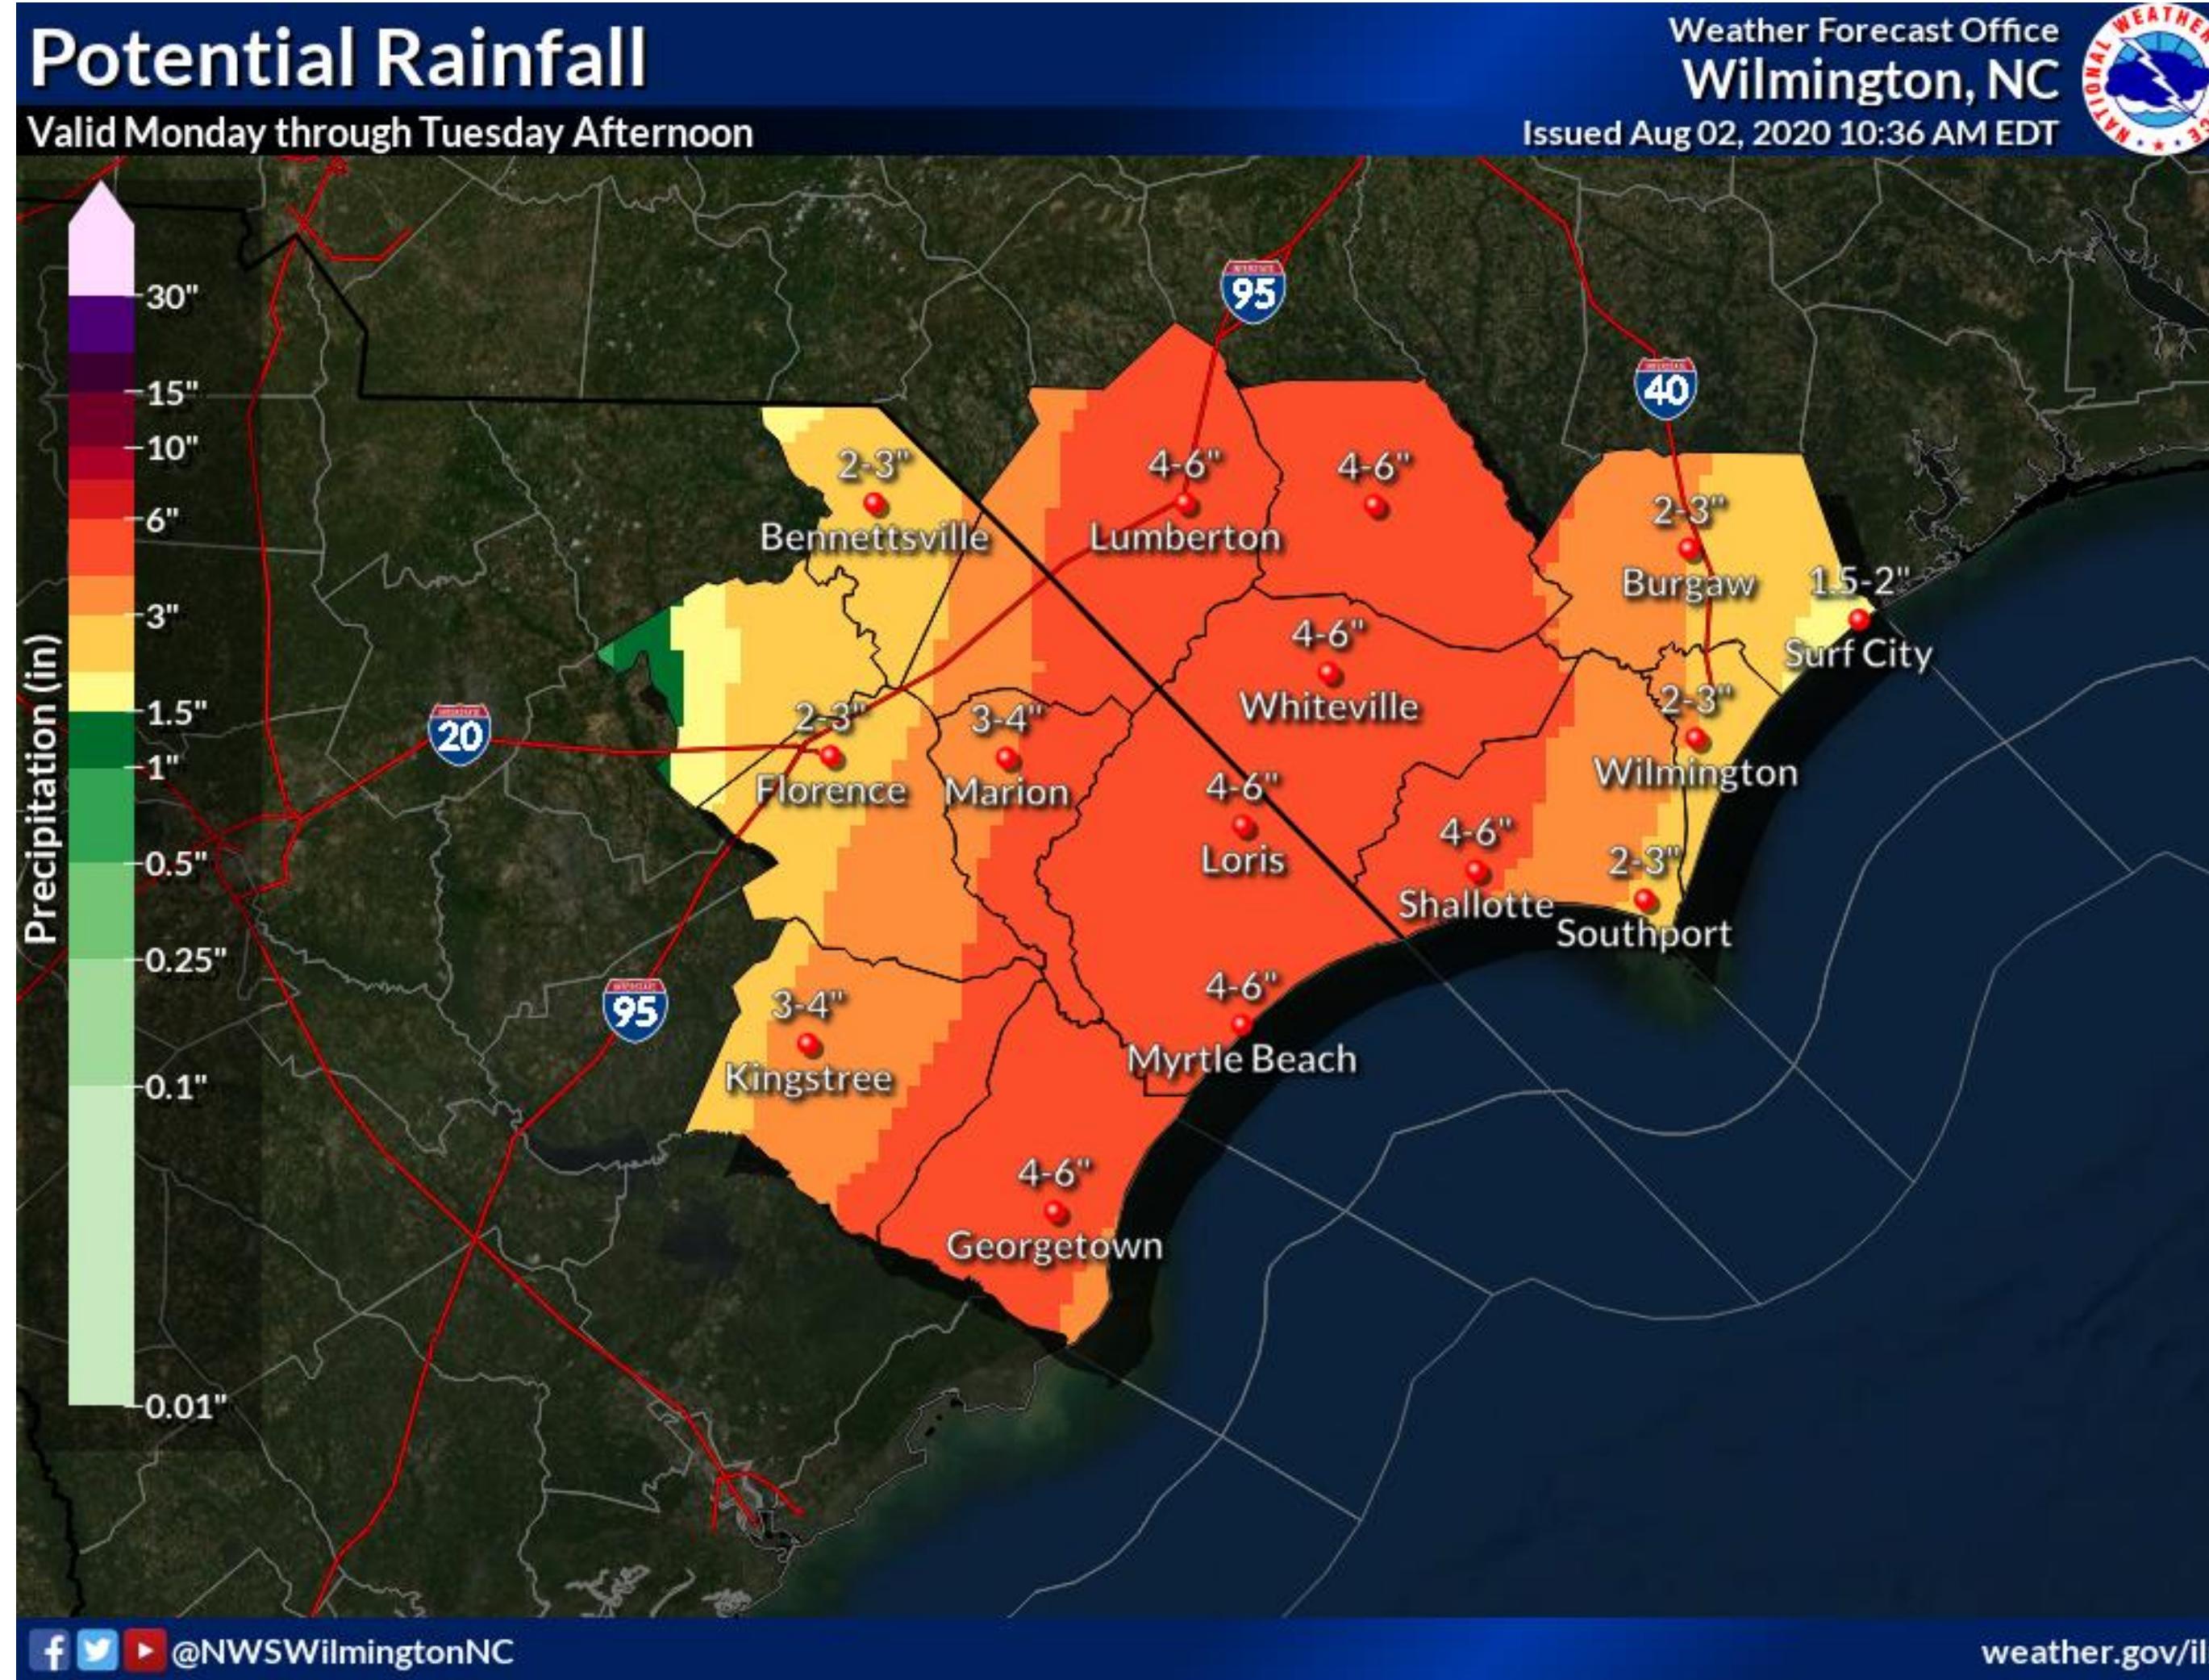

Expected Storm Total Rainfall

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

- Large swath of 4-6" rainfall amounts are expected over much of the area with isolated higher amounts possible
- A Flash Flood Watch is in effect
- As a result, some flooding may occur, especially at poor drainage and other flood prone low-lying areas
- The greatest potential for flooding would be Monday night into early Tuesday morning
- Any subtle change in the track can shift the location of the axis of heaviest rainfall

Note: Rainfall amounts are highly dependent on the storm's track. As a result, any change could result in significant differences to the amount, and where the highest totals occur.

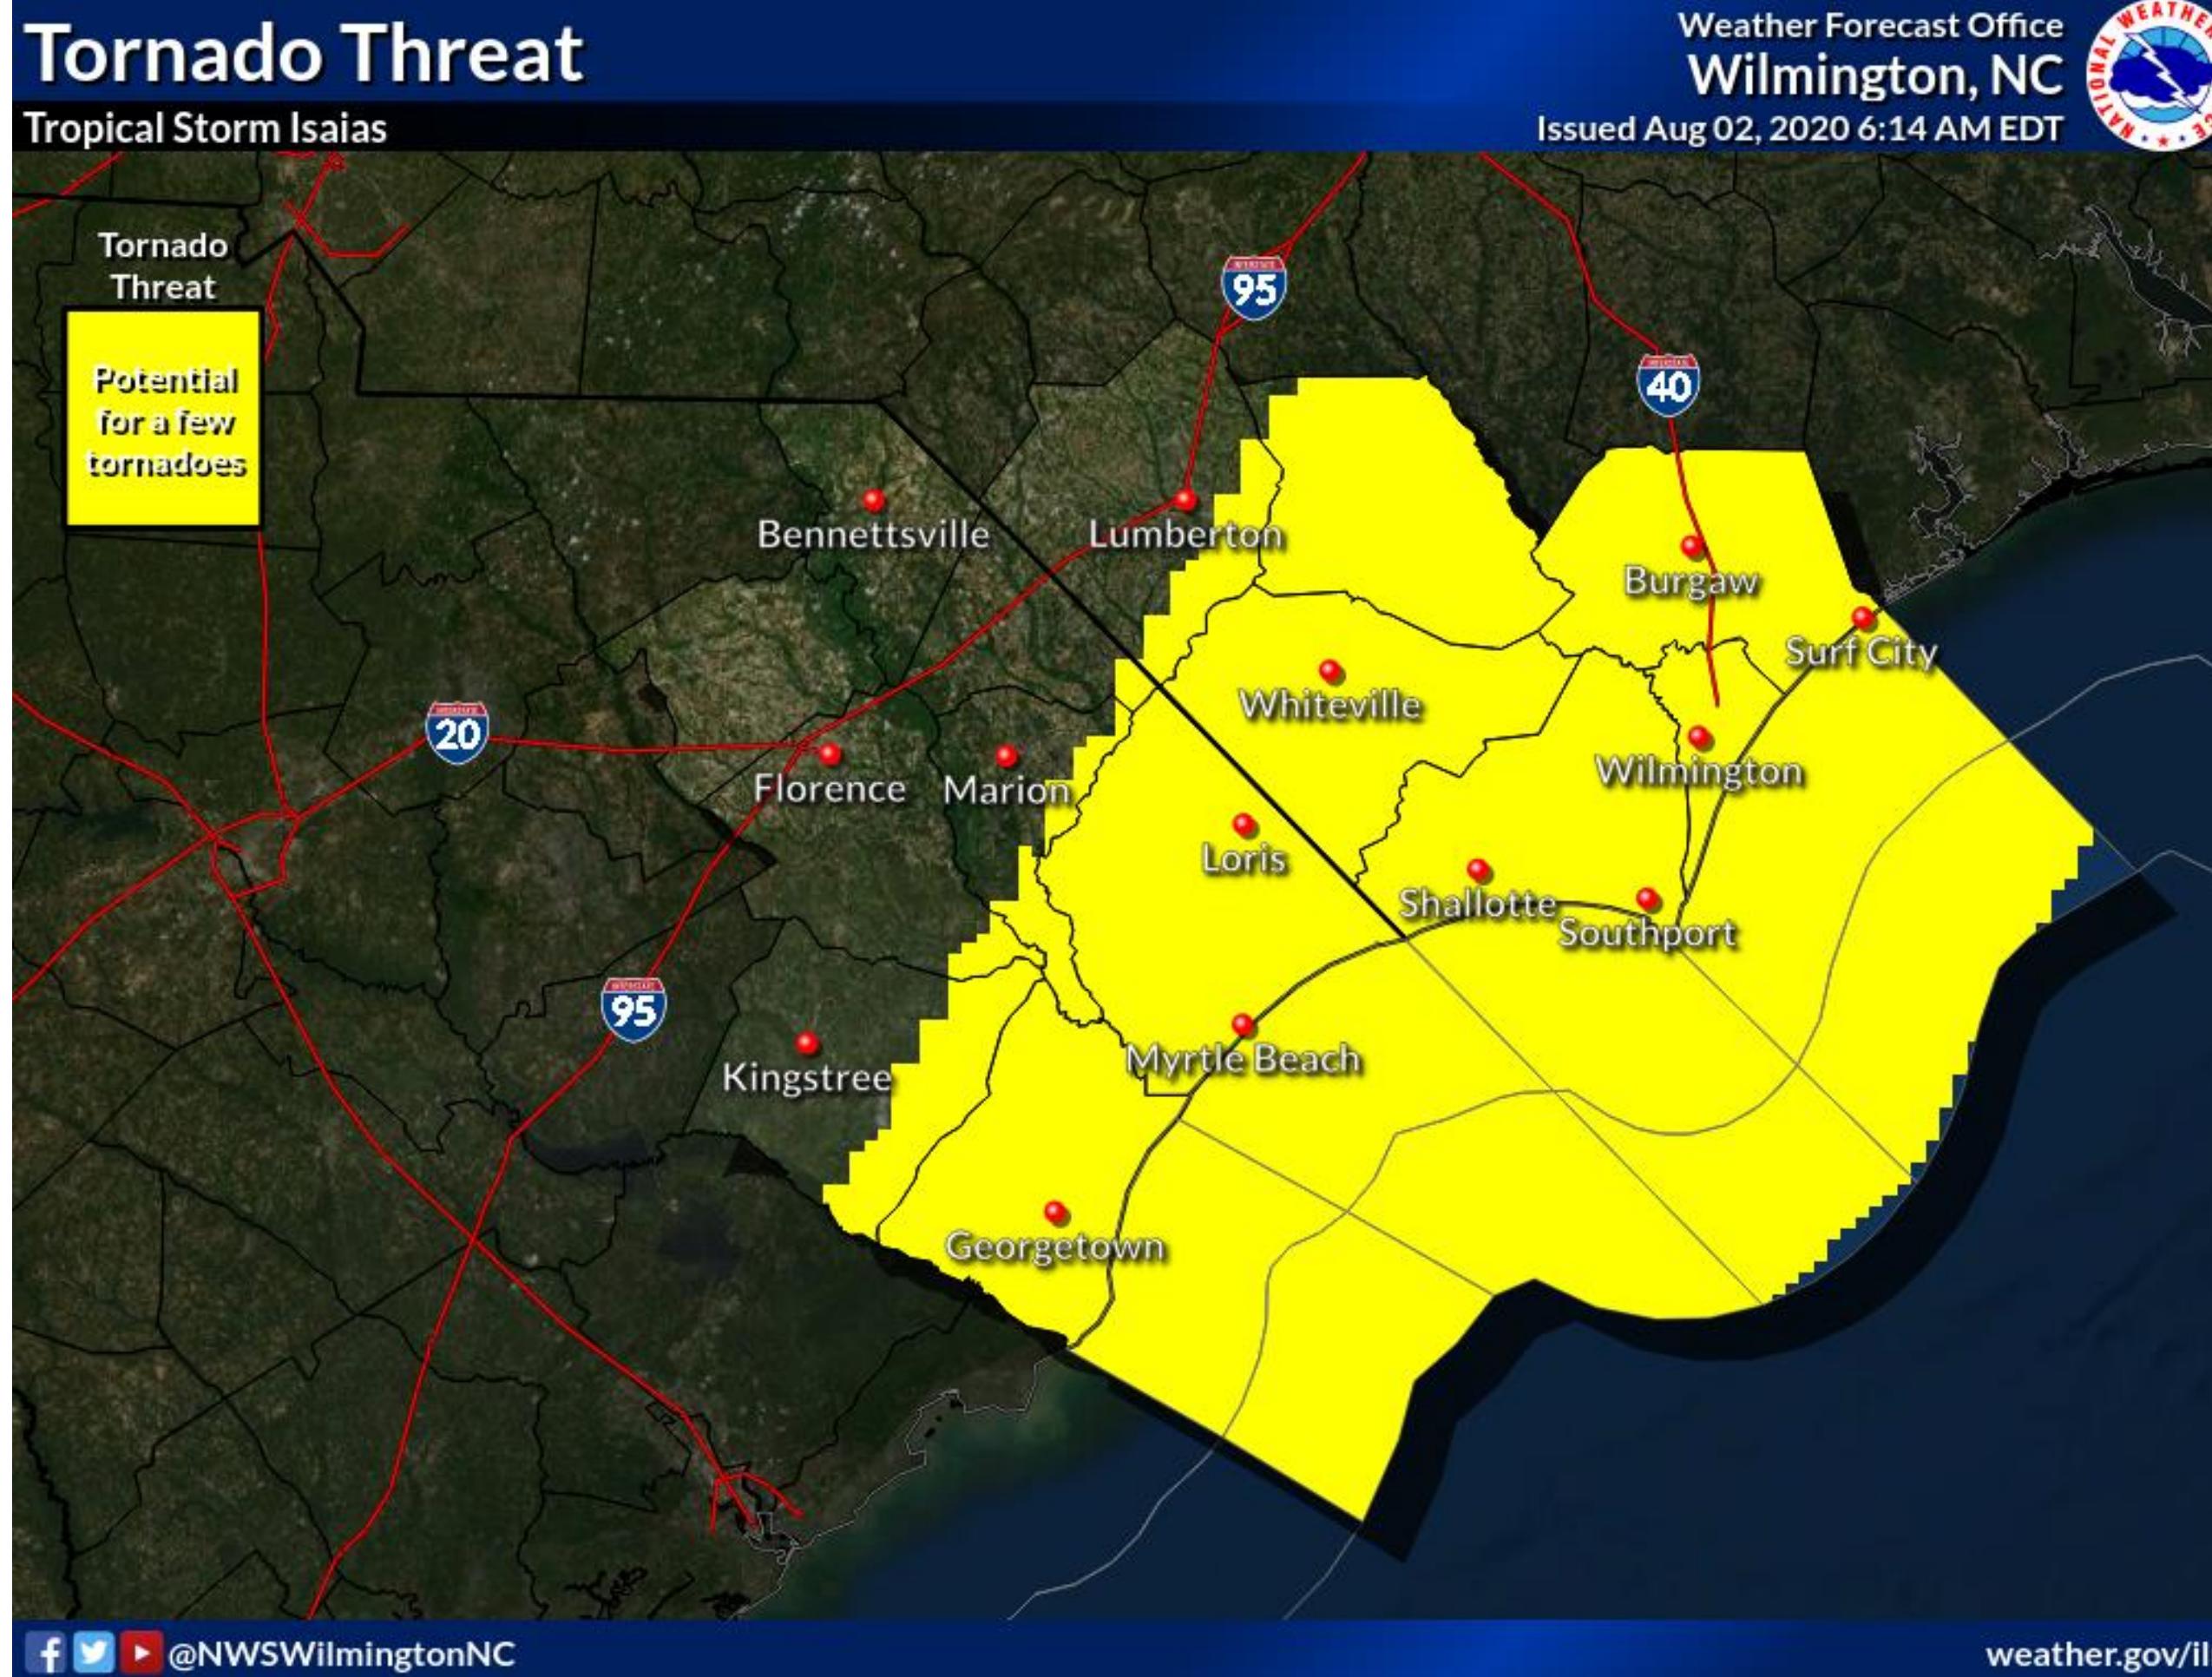

Potential Tornado Impacts

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

- There is a potential for a few tornadoes, especially east of a Lumberton to Marion and Kingstree line
- Tornadoes can significantly damage homes, destroy mobile homes, and uproot/snap trees

Tornado Potential

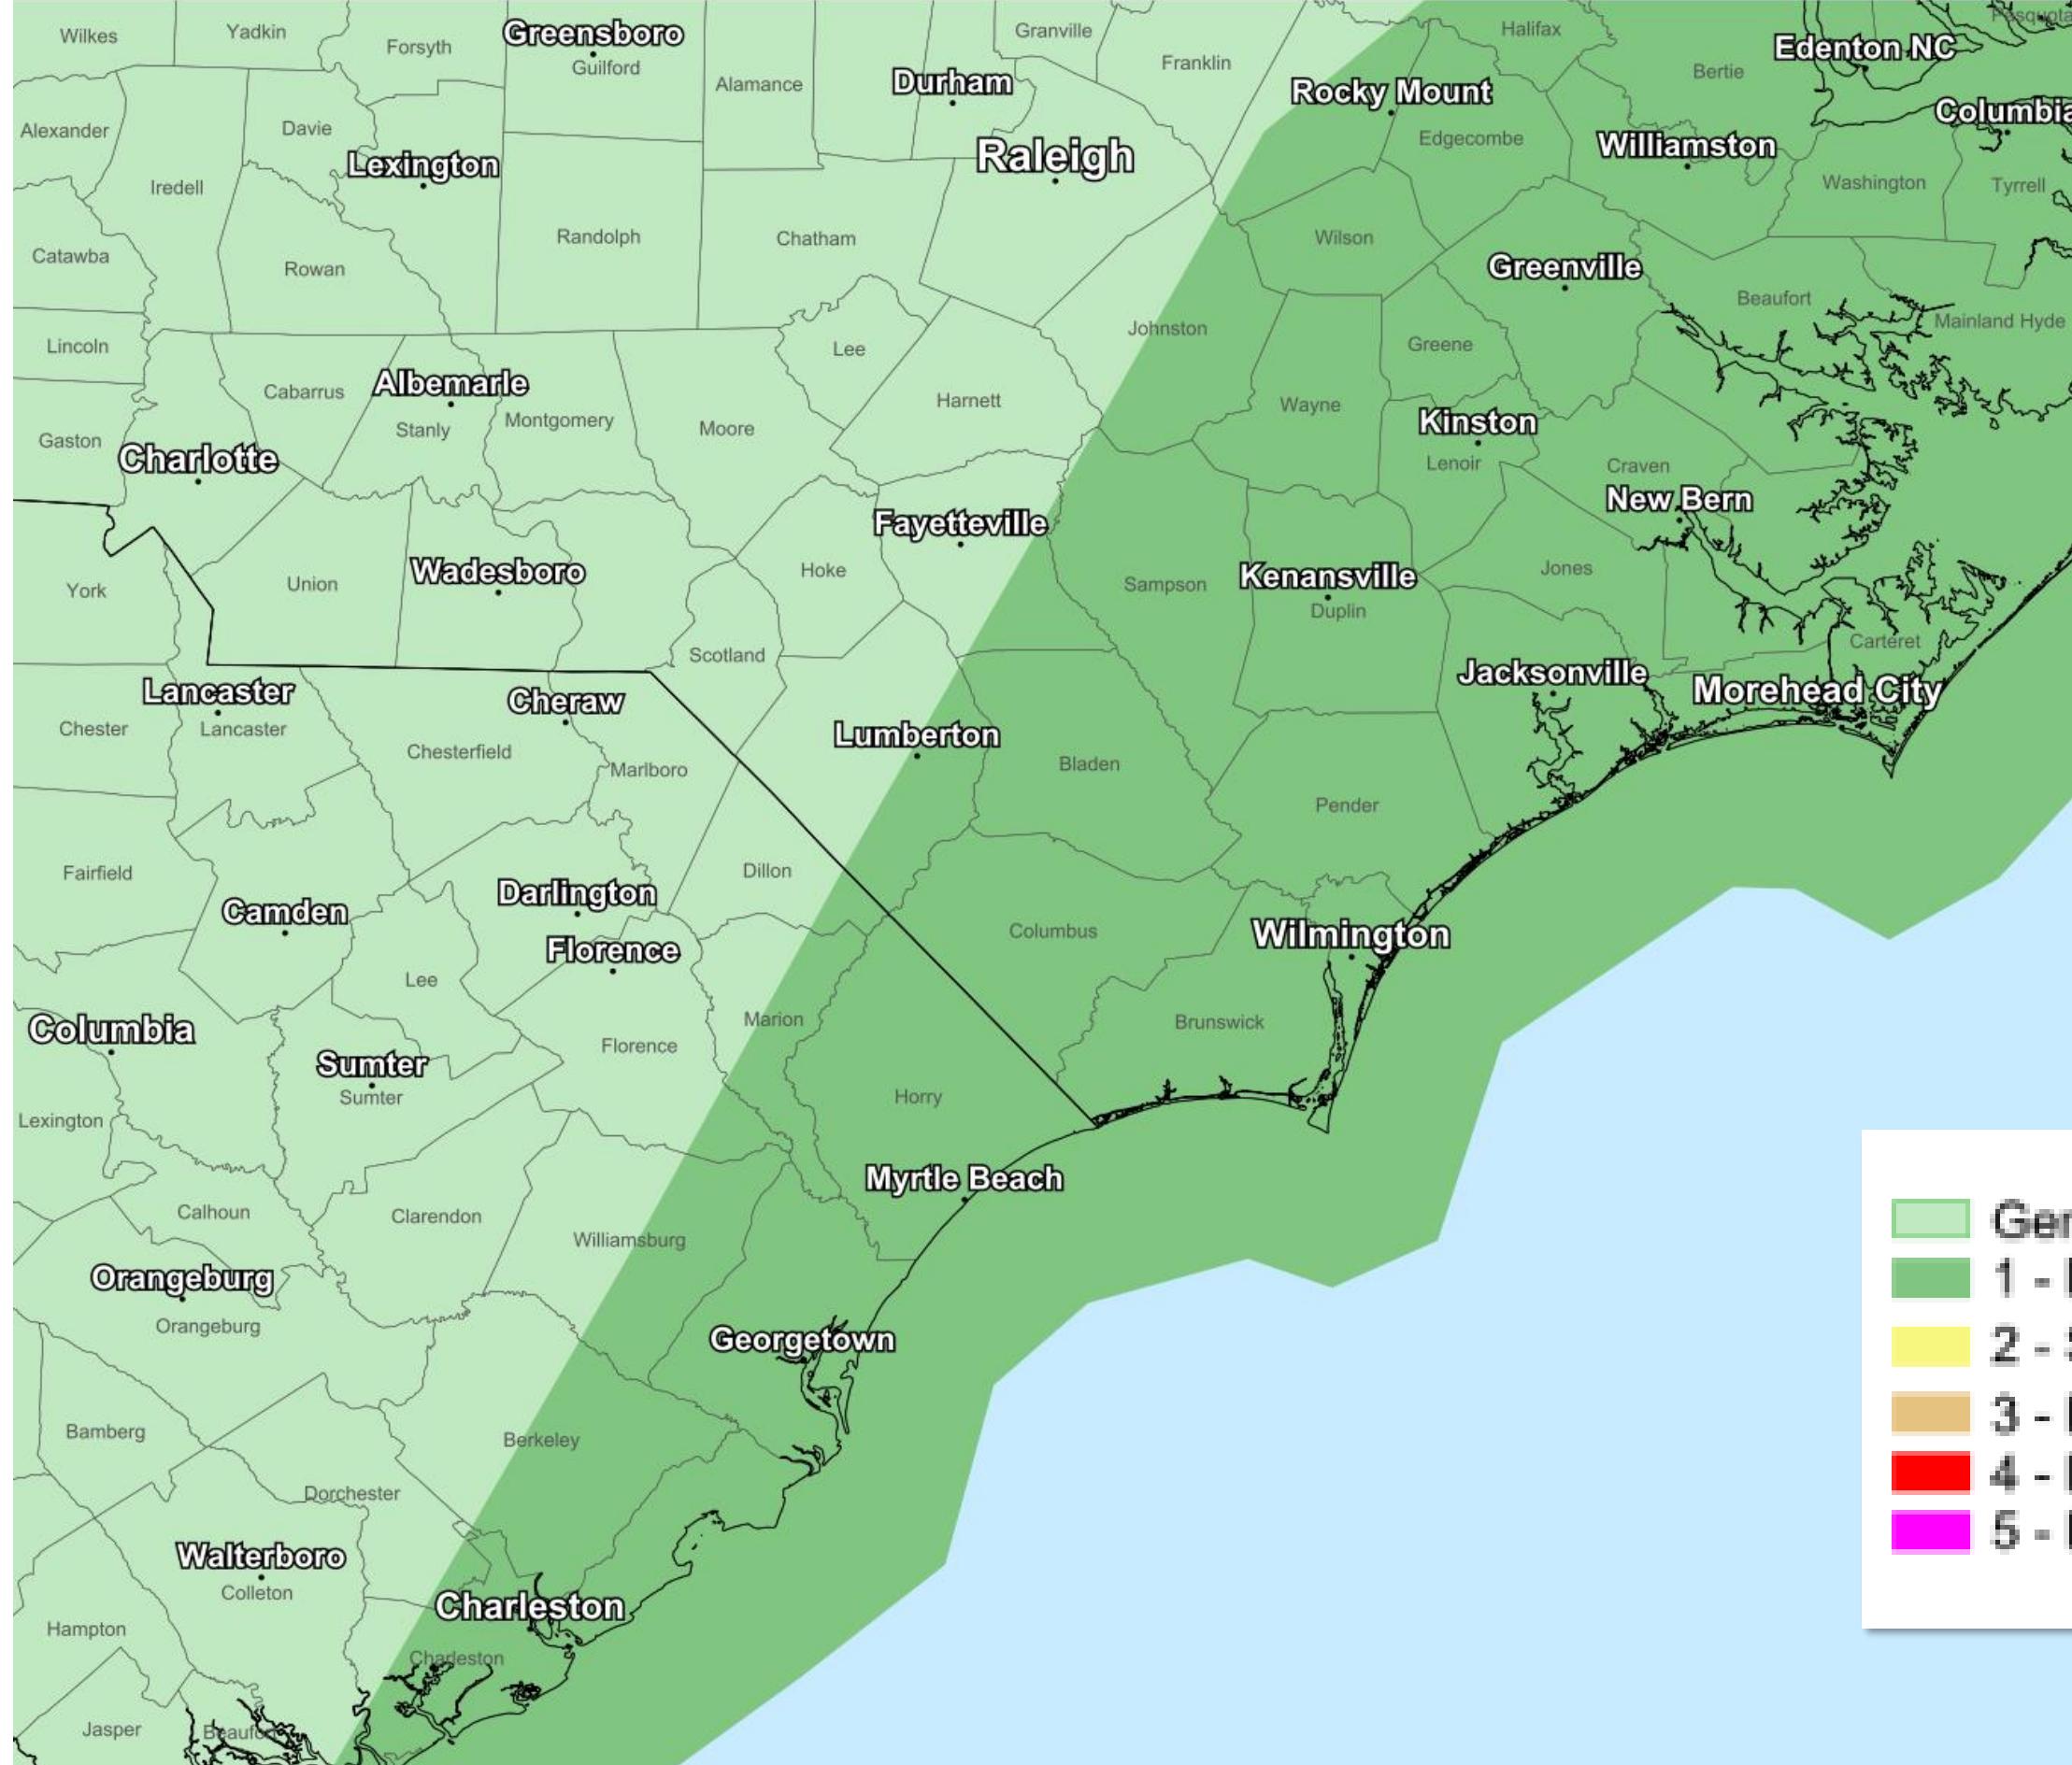

Tropical Storm Isaias

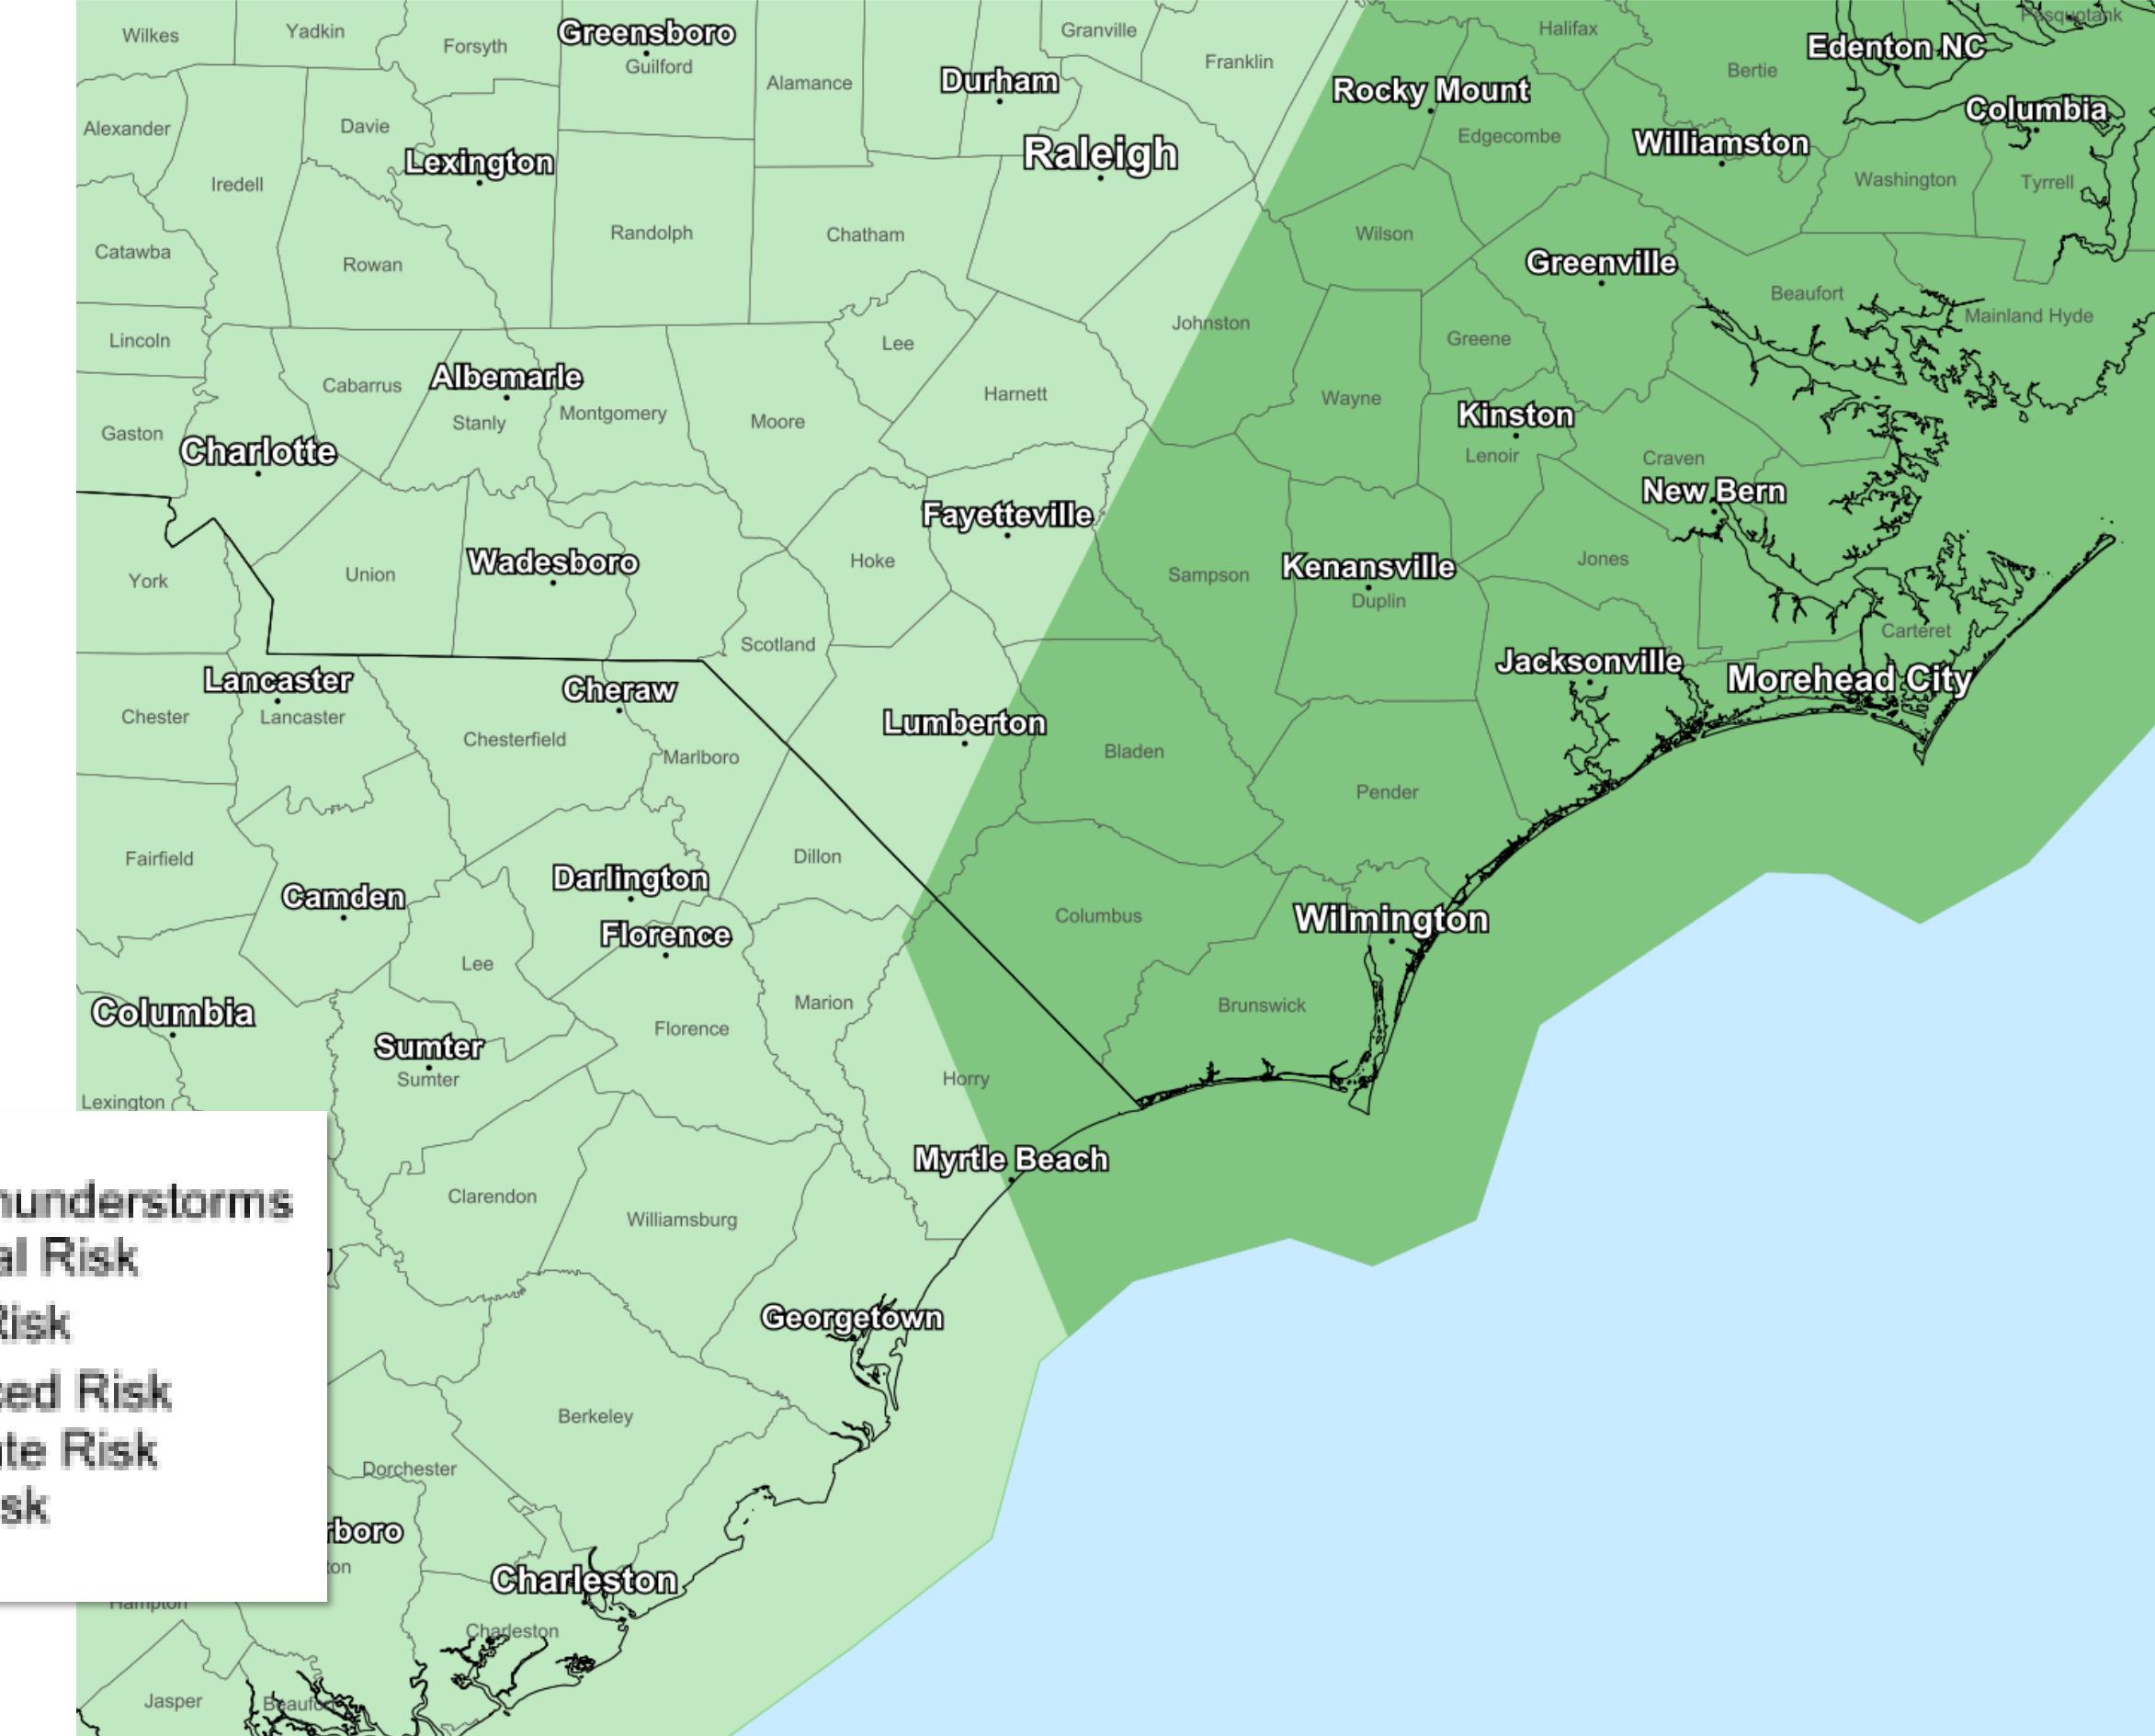

Wilmington NC

WEATHER FORECAST OFFICE

Tomorrow's (Monday) Severe Weather Outlook

Tuesday's Severe Weather Outlook

- There is a risk for tornadoes primarily for Monday afternoon/night (left image) primarily east of a Lumberton to Kingstree line and the risk area changes Tuesday morning (right image) into extreme northeast portions of SC and most of southeast NC coastal areas of the Carolinas

Potential Storm Surge Impacts

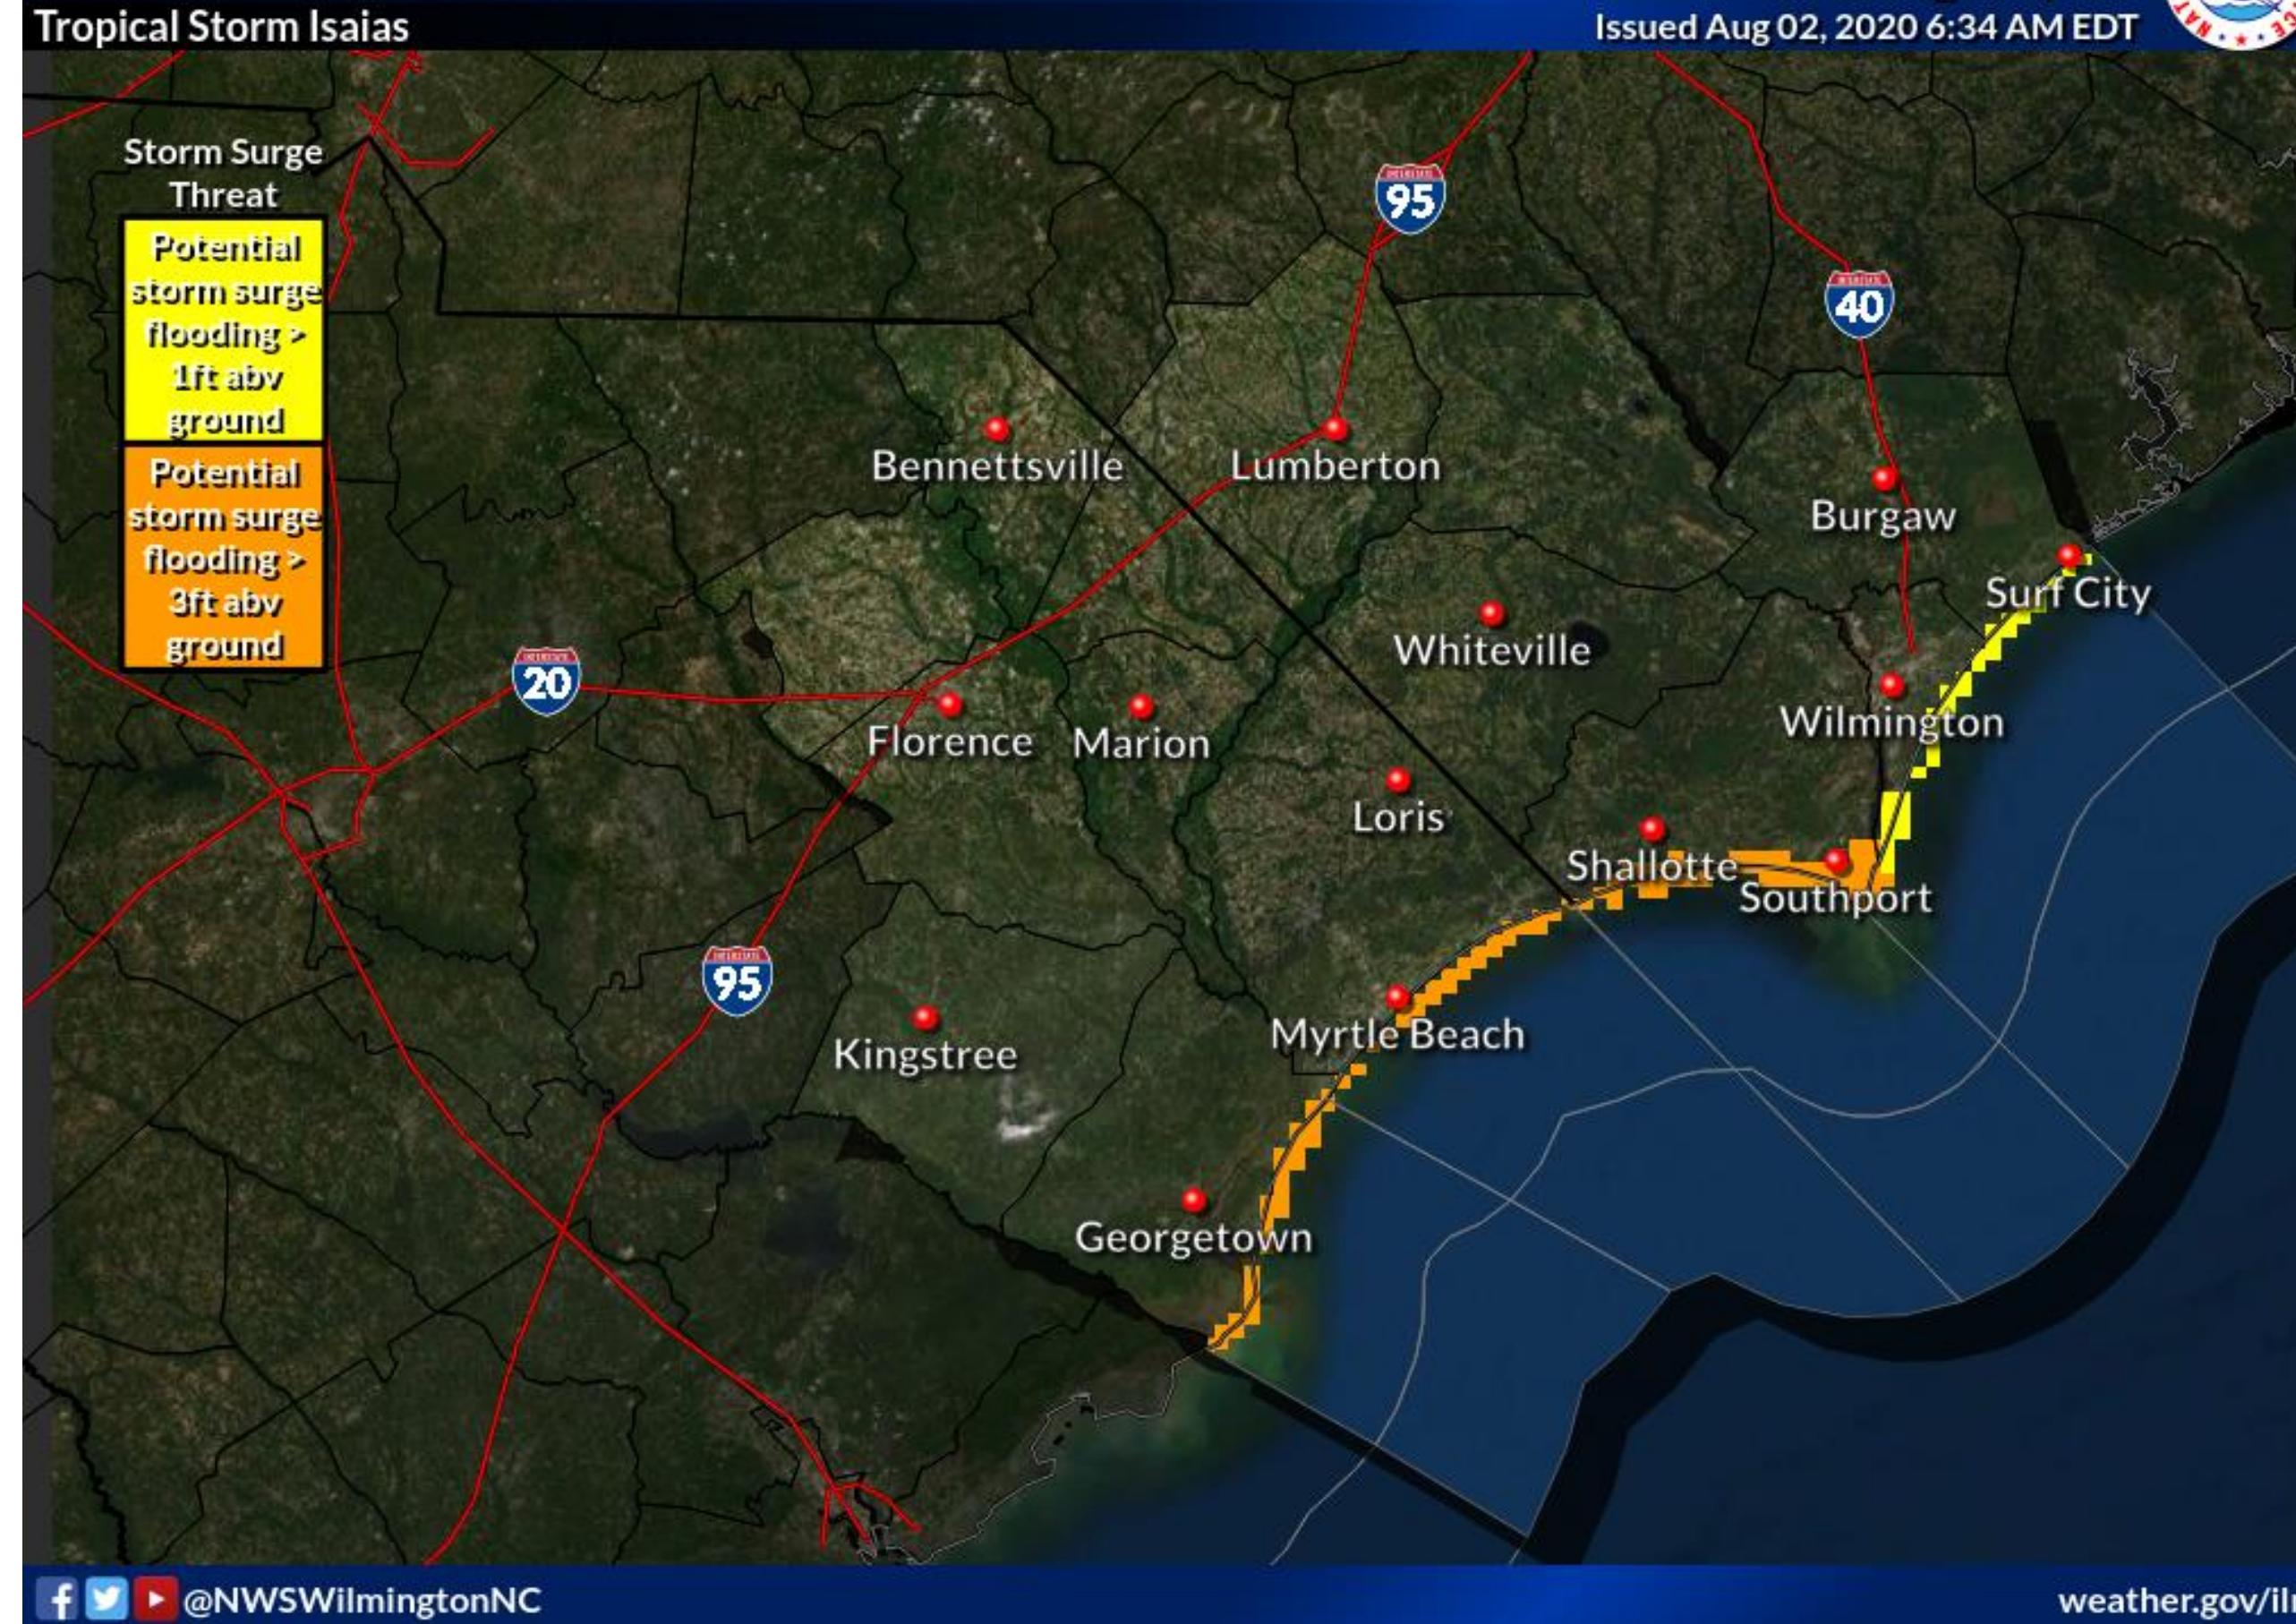

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Storm Surge Threat

There is a moderate storm surge threat from Cape Fear south toward the northeast SC coast

- Areas of storm surge inundation enhanced by breaking waves are possible along barrier islands in the moderate threat area
- Potential impacts include: flooding of some coastal roads and beach access points, beach erosion, some damage to vulnerable structures especially in areas with weakened dunes, damage to beach ramps and stairways

Storm Surge

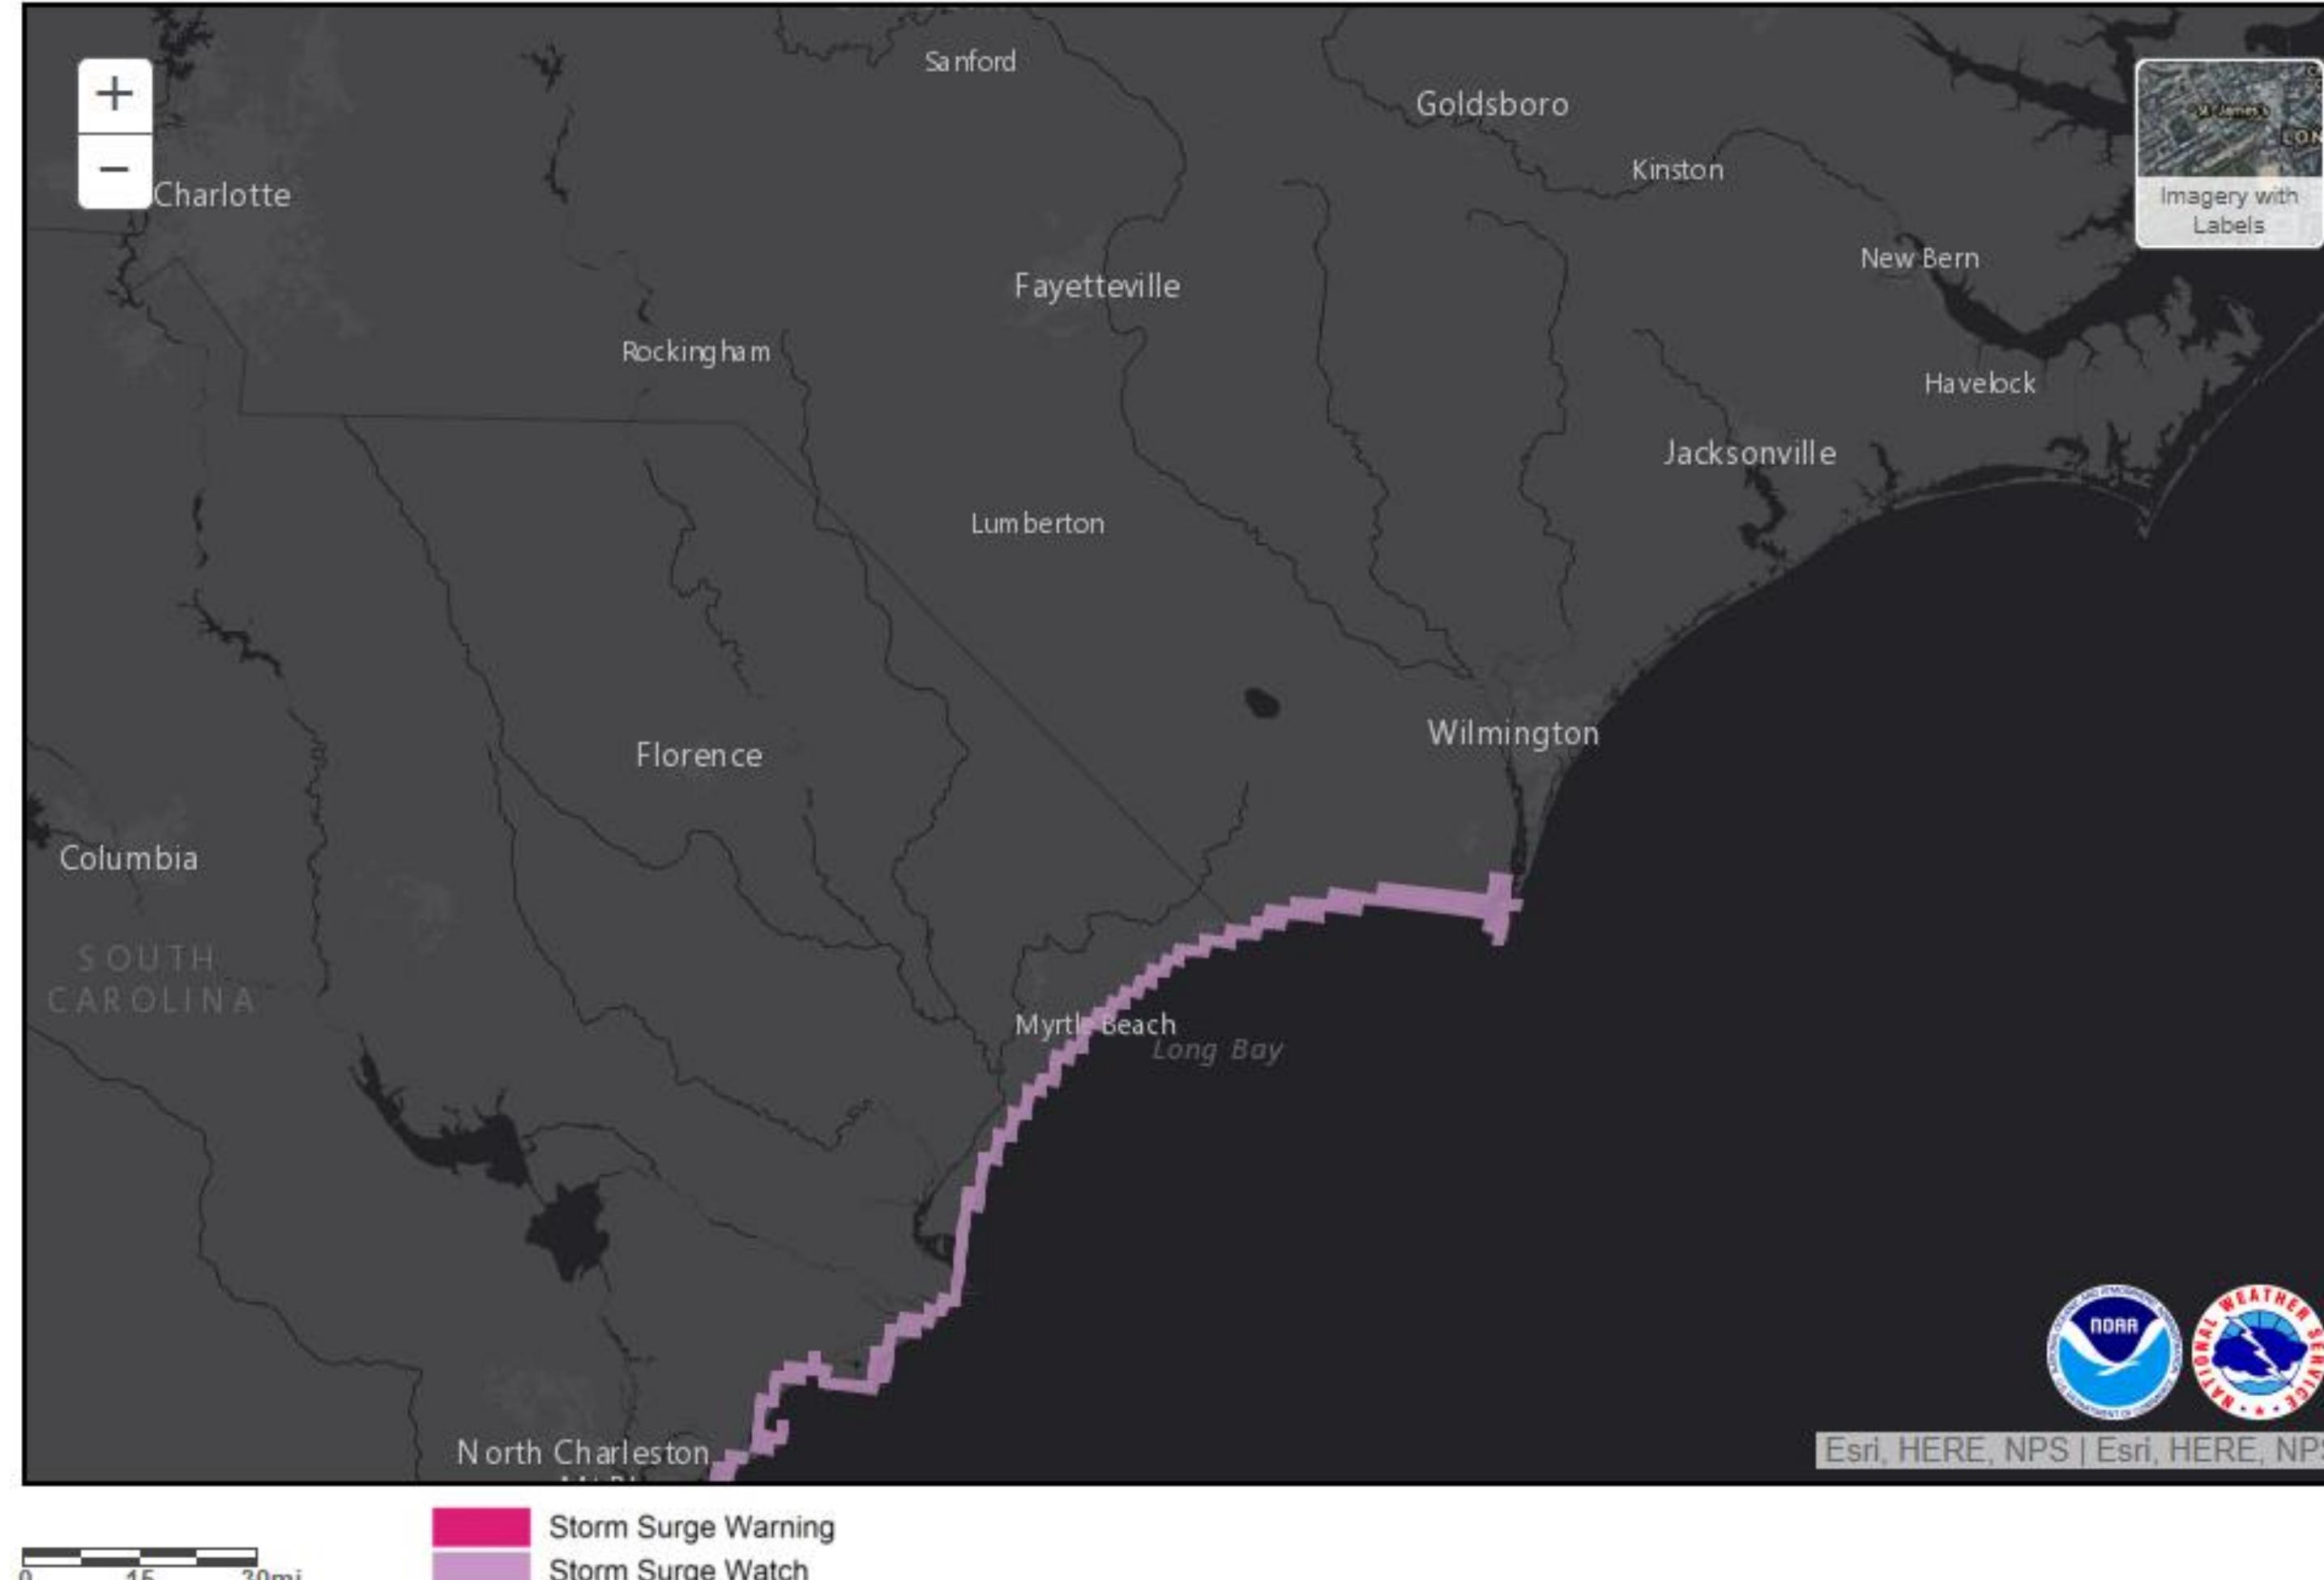

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Tropical Storm Isaias
Advisory 022 Issued: 11:00 AM EDT Sun Aug 2

- Storm Surge Watch in effect from Cape Fear southward along the northeast SC coast
- Possibility/danger of life-threatening inundation from storm surge somewhere in the watch area within 48 hours

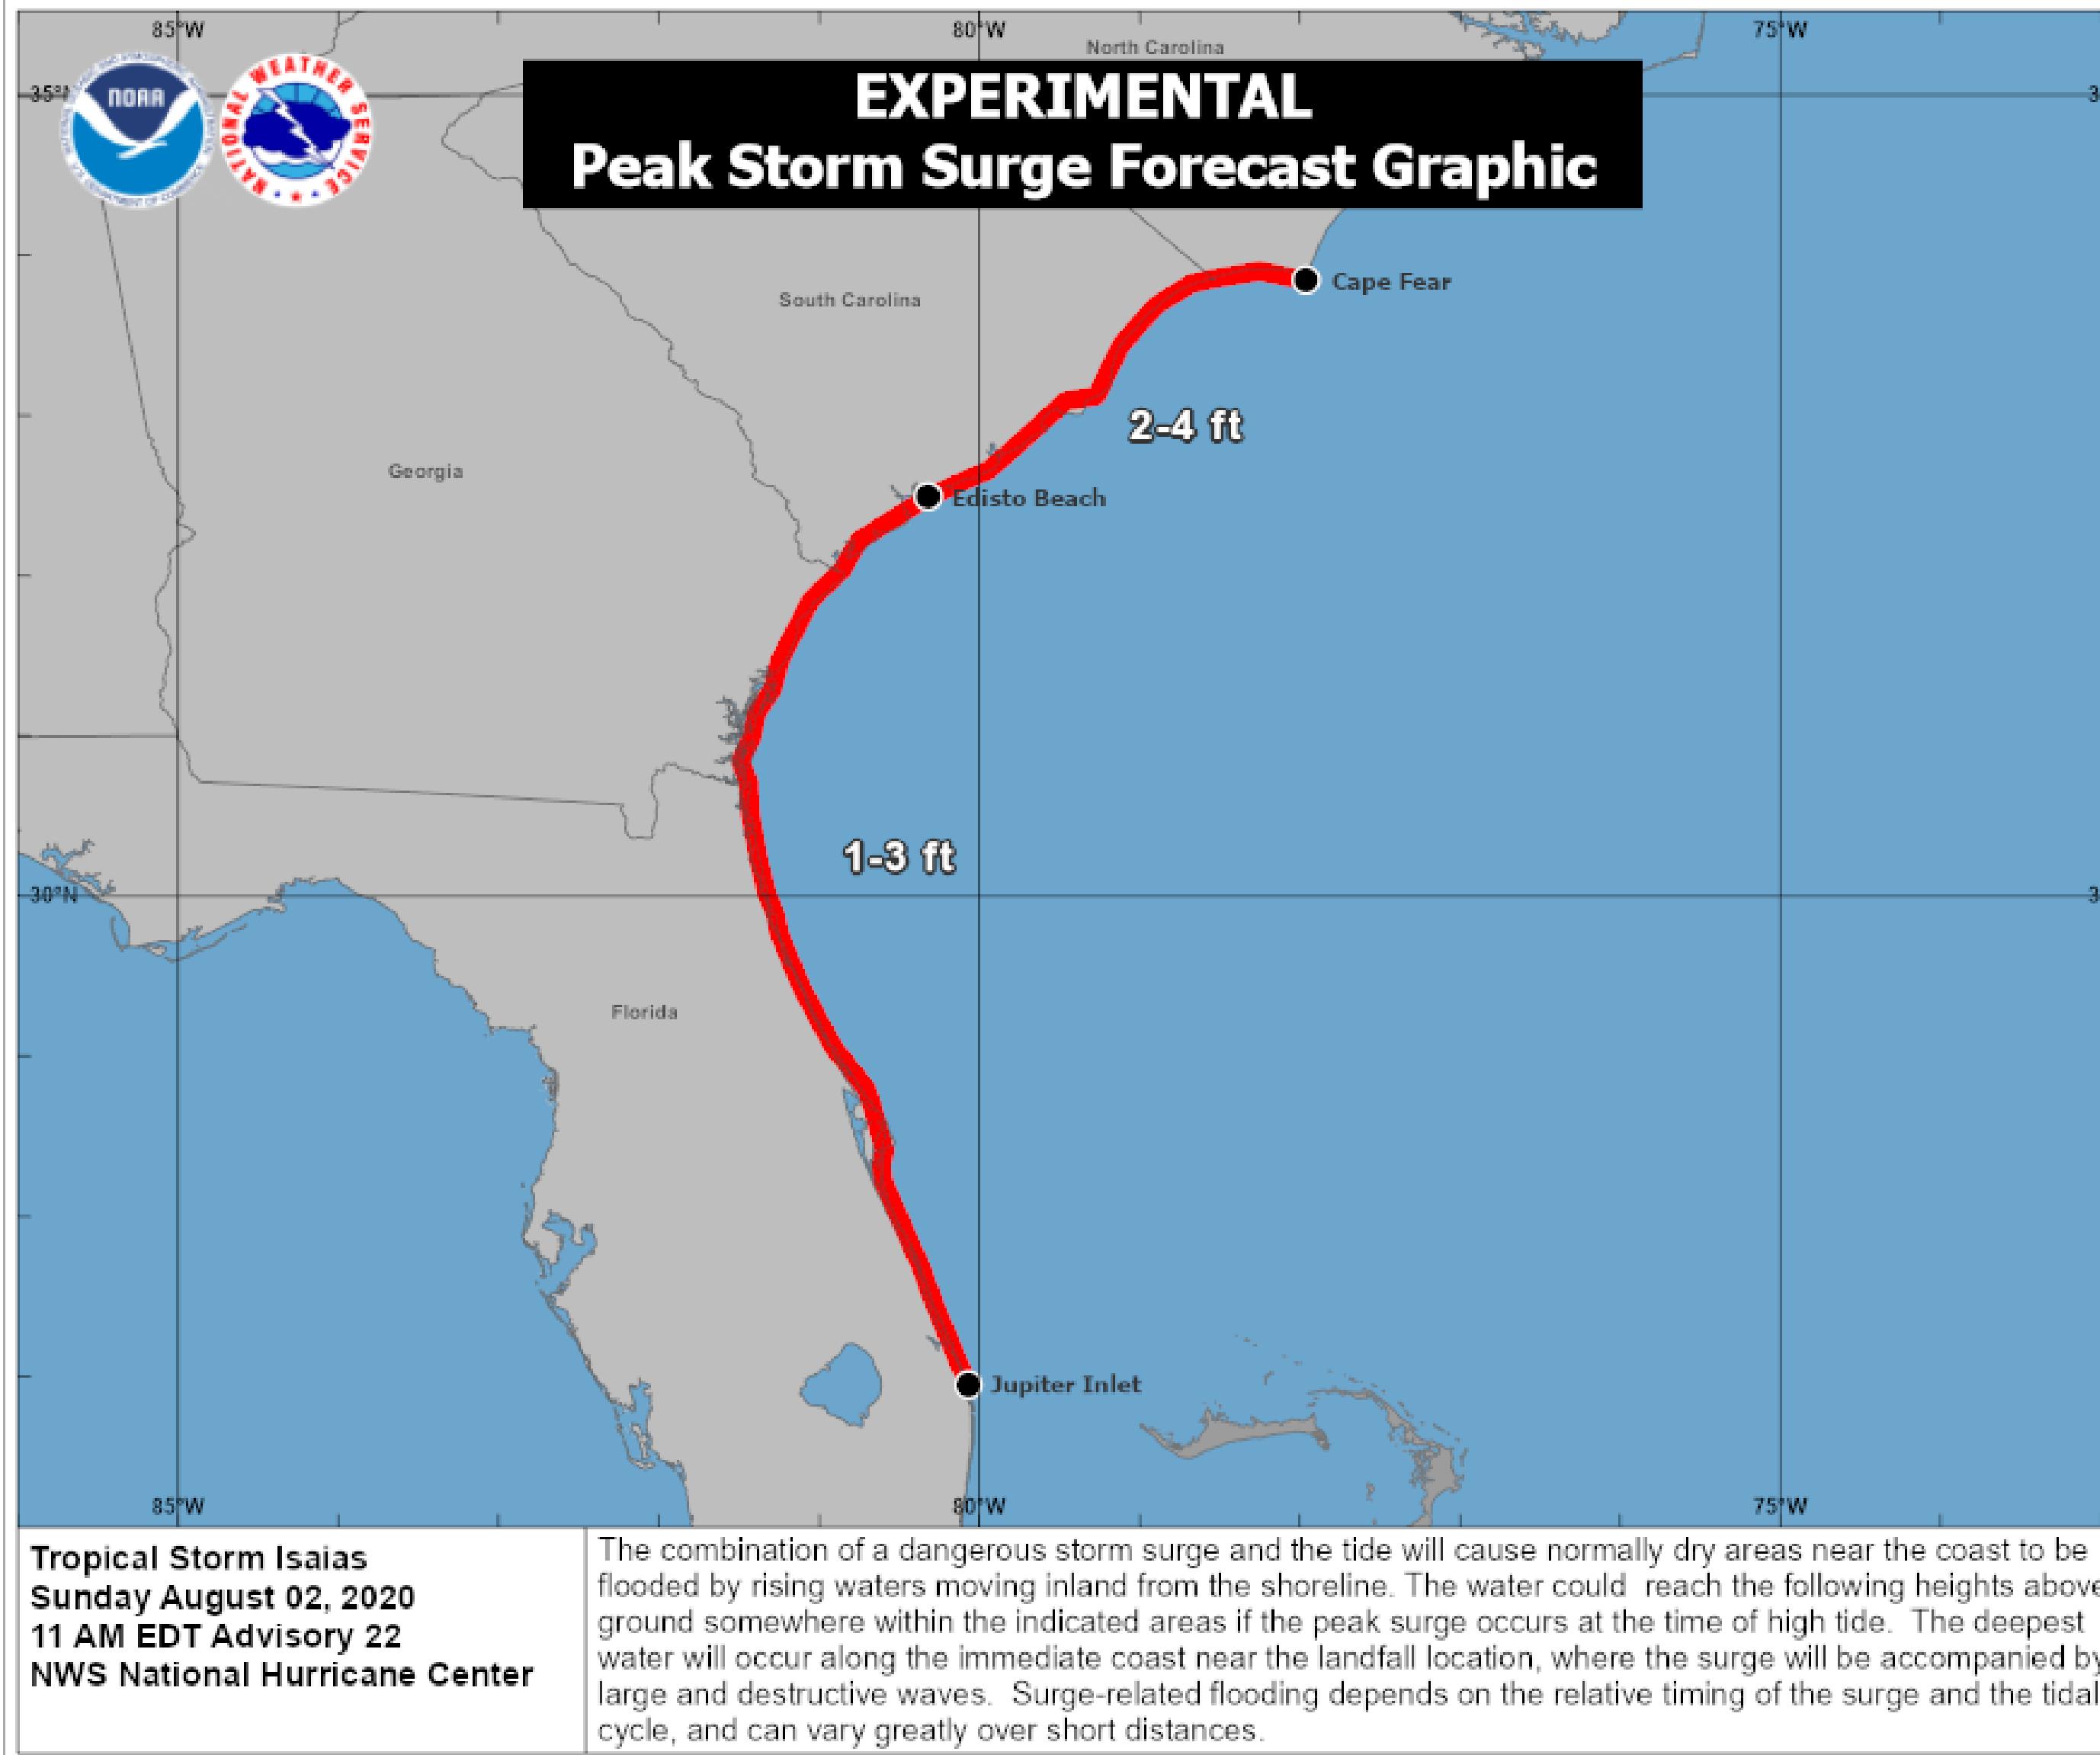

Storm Surge

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

- Potential storm surge of 2-4 ft from Cape Fear southward to the northeast SC coast

Marine/Coastal Hazards

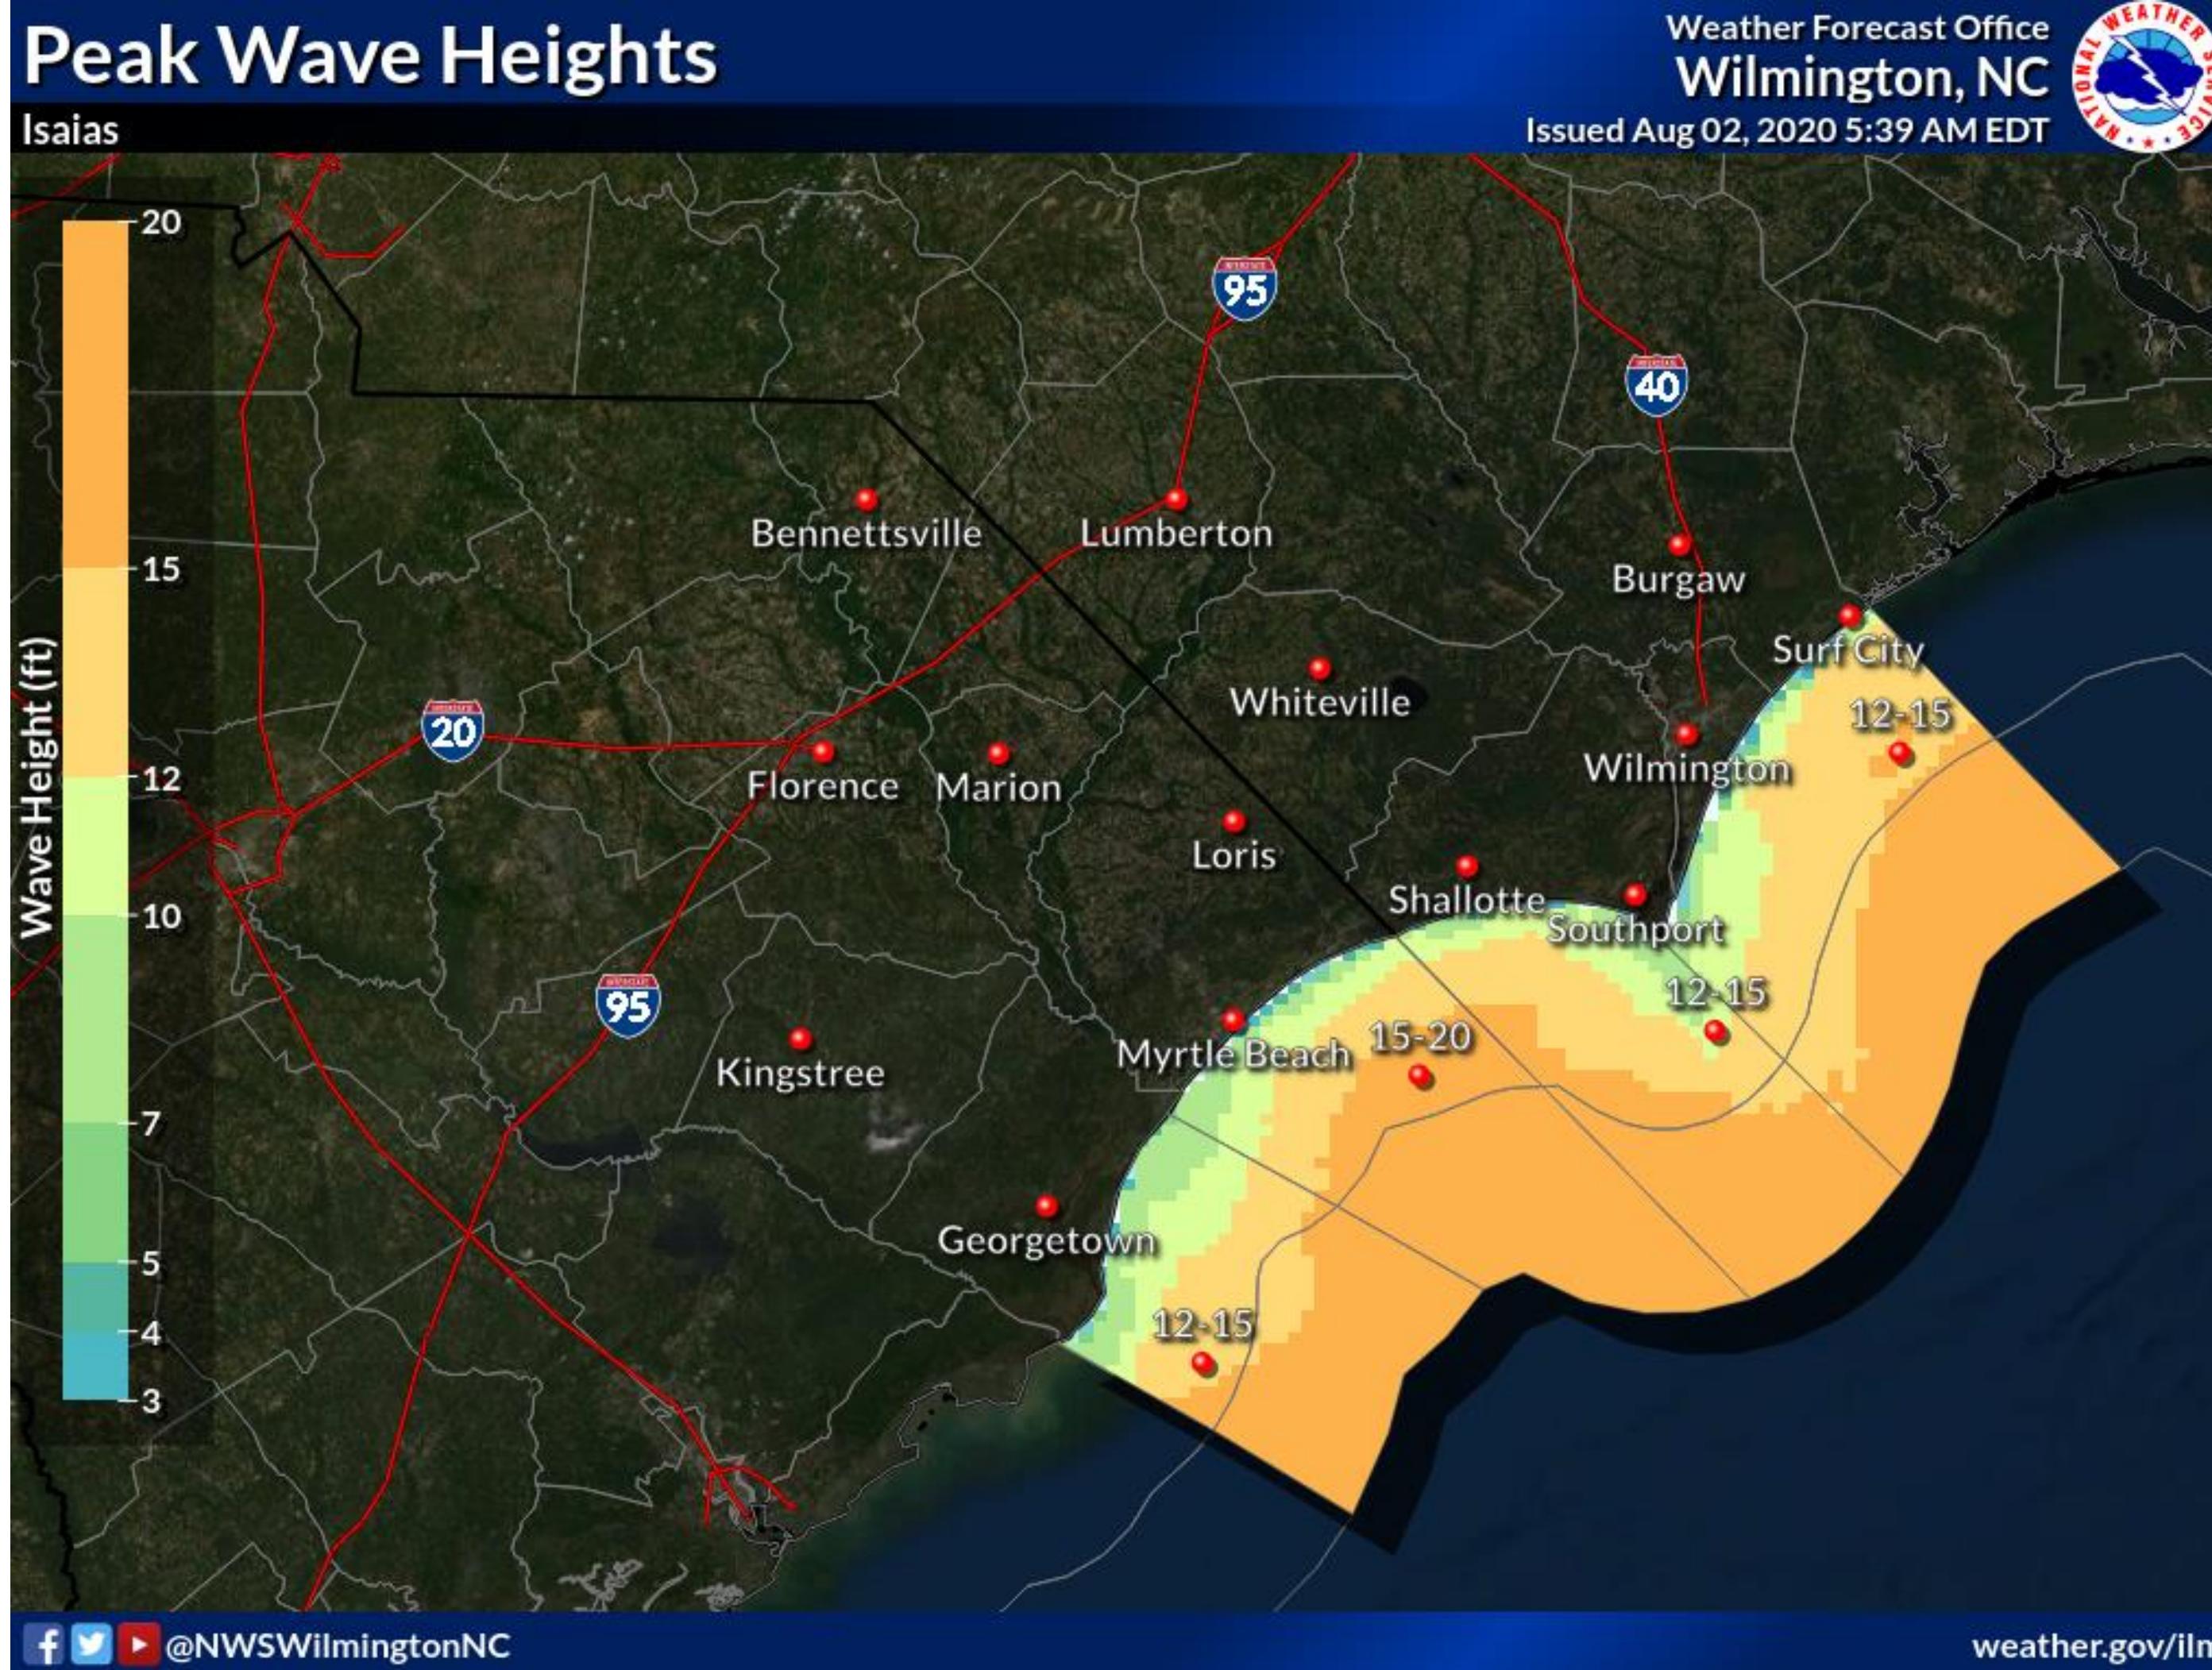

Tropical Storm Isaias

Wilmington NC

WEATHER FORECAST OFFICE

Peak Wave Heights

- Dangerous rip currents are expected today through Tuesday
- Hazardous winds/seas are expected to develop for the adjacent coastal waters with the worst conditions Monday night into Tuesday morning
- Maritime conditions are expected to improve by Tuesday night into Wednesday

Key Take-Aways

Tropical Storm Isaias

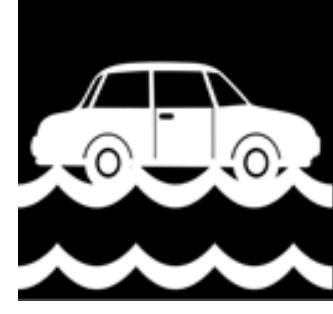

Wilmington NC

WEATHER FORECAST OFFICE

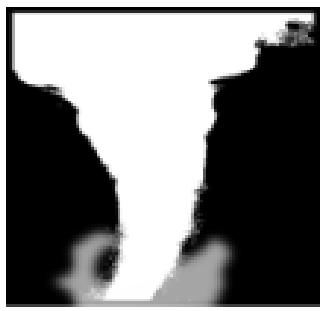

Tropical storm force winds are possible by Monday night for northeast SC and Monday night into Tuesday morning for southeast NC. The gusty winds could cause downed trees/limbs and some power outages.

Some storm surge inundation and beach erosion are possible, especially with high tide Monday night from Cape Fear southward to northeast SC coastal areas.

Heavy rainfall is possible along with some flooding of poor drainage and flood prone areas. Currently, most areas are expected to receive 4-6" with some locally higher amounts possible.

Some tornadoes are possible - especially Monday afternoon/night into Tuesday morning.

Hazardous maritime conditions will develop later this weekend and especially during Monday night across adjacent coastal waters. In addition, strong rip currents are possible today through Tuesday.

There is some potential for minor to moderate river flooding (30% chance) – however this is dependent on where the heaviest rainfall occurs.
